UNA SEMANA. UN NÚMERO.

WEEKLY existe porque internet produce demasiadas cosas interesantes como para intentar leerlas todas y demasiadas cosas absurdas como para dejar que el algoritmo decida por nosotros.

Esta revista junta las fuentes que elegiste, encuentra historias que merecen atención y las convierte en un número que se puede leer de principio a fin. No pretende ser neutral sobre lo que resulta interesante: pretende ser curiosa.

Aquí conviven videojuegos, cine, animación, tecnología, retro y todas esas cosas raras que terminan apareciendo cuando uno sigue un enlace porque decía que algo era prácticamente magia.

WEEKLY no quiere reemplazar a las fuentes originales. Quiere ser el lugar desde donde descubres qué vale la pena abrir. Cuando una historia está completa, la leemos aquí. Cuando una fuente solo permite ofrecer un resumen, te mandamos a leerla donde corresponde.

Una semana. Un número. Un montón de cosas interesantes.

Nos vemos la próxima semana.

UK studio Bulkhead's Wardogs sells over a million copies and tops 350,000 concurrent players on launch day

Wardogs, the new tactical shooter from Derby-based studio Bulkhead, has sold more than a million

Wardogs, the new tactical shooter from Derby-based studio Bulkhead, has sold more than a million copies and passed 350,000 concurrent players within hours of launching into Steam early access.

As IGN reports, the game's server queues filled up quickly as a result, with plenty of players unable to jump straight into a match due to server congestion.

"To cross a million copies sold as we launch into early access is mental," said Bulkhead CEO Joe Brammer. "We've spent the last few months showing people exactly what Wardogs is, what it isn't, and at one point literally gave everyone ten reasons not to buy it. We didn't want people buying into blind hype."

He continued: "So seeing more than one million people choose to jump in and play the game at early access launch means a huge amount to all of us. But this is still early access. We've got things to fix, things we want to improve, and a lot more we want to build. The best thing players can do now is keep playing, keep telling us what they think and keep giving us those ridiculous Wardogs moments."

Wardogs' matches put up to 100 players into three-way fights for control points, mixing tactical shooting with vehicle combat, base construction, and destructible terrain.

The game is currently PC-only through Steam, priced at £36.99, with Bulkhead confirming PS5 and Xbox versions are coming in 2028, though without a firm release date.

Bulkhead has said it expects interest to settle down over time, given the studio is planning a slower drip of content updates rather than trying to sustain launch-day numbers indefinitely.

Scalpers are already reselling the sold-out Zelda 40th Anniversary Switch 2 for £700+

Nintendo's new Legend of Zelda 40th anniversary Switch 2 sold out within hours of preorders opening, and scalpers are already scalping, with dozens of orders popping up on eBay for close to double its retail price.

Nintendo announced a new Zelda-themed console earlier this week, with Link-green Joy-Cons and a triangular pattern inspired by the golden glow of the Triforce. Plus, there's a similarly styled Switch 2 Pro Controller and carry case coming, too.

Retailers listed the console for preorder at around £435, £15 more than the standard Switch 2. All sold out almost immediately and Nintendo hasn't yet made the special edition available for preorder through its own store, nor said anything about restocking it before launch.

As GamesRadar+ reports, scalpers have since listed the console on eBay for anywhere between \$700 and \$985 (that's £520-£730ish). Some listings bundle it with the upcoming Ocarina of Time remake, even though Nintendo isn't offering any such bundle.

The Zelda-themed Switch 2 launches on 29th October, a week ahead of the Ocarina of Time remake itself, which arrives on 5th November.

You can see everything else revealed in the same Direct, including the Ocarina of Time remake itself, in Eurogamer's full roundup: everything announced at the Legend of Zelda 40th anniversary Nintendo Direct.

Everything announced in the BlizzCon 2026 Opening Ceremony

UPDATE 13TH SEPTEMBER: Below you'll find a blow-by-blow account of everything announced during yesterday's BlizzCon 2026 Opening Ceremony. It was a big show, revealing a new StarCraft shooter for 2030, the surprise reveal of Diablo 5 for 2029, and World of Warcraft Forever - a remastered and expanded version of year-one World of Warcraft that will evolve in a different way and will lock players at level 60 forever. Blizzard also announced a brand new 30-hour story

UPDATE 13TH SEPTEMBER: Below you'll find a blow-by-blow account of everything announced during yesterday's BlizzCon 2026 Opening Ceremony. It was a big show, revealing a new StarCraft shooter for 2030, the surprise reveal of Diablo 5 for 2029, and World of Warcraft Forever - a remastered and expanded version of year-one World of Warcraft that will evolve in a different way and will lock players at level 60 forever. Blizzard also announced a brand new 30-hour story campaign for Warcraft 3, that's available today, a new class for Diablo 4 and character for Overwatch, and much more.

ORIGINAL STORY 12TH SEPTEMBER: Blizzard's BlizzCon convention returns this weekend after two years' absence, and I'll be covering the news and announcements from today's opening ceremony live, here in this article. The show begins 6.30pm BST (UK time).

Regional timing can be found on the official BlizzCon website (it's cleverly transposed depending on the region you're viewing from), and the expected runtime for the opening ceremony is one hour and 15 minutes.

I'm expecting a full show today. The headline act is presumed to be the much-rumoured StarCraft shooter Blizzard has been working on for a while now - the one led by former FarCry boss Dan Hay. The suggestion is it'll be a co-op shooter like Warhammer 40,000: Space Marine 2, rather than something fundamentally multiplayer and online like Destiny. But who exactly is making it? Nexon's name has been thrown around a bit, and would it make sense for a foundationally multiplayer company like Blizzard to make something that was only co-op?

There's also the much-rumoured World of Warcraft "Classic Plus", which is a Classic version of World of Warcraft that aims to take the original game in a new direction, evolving it with brand new updates. We saw Blizzard do this with Diablo 2 earlier this year, when introducing a new Warlock class to the old game, which is something it intends to be the start of a new evolutionary direction for that game. We expect to finally get confirmation - and perhaps a shadow-drop - of a Switch 2 version of Diablo 4, too.

CONTINÚA · HISTORIA 03

Besides those things, we're expecting to hear about new expansions for Overwatch and Diablo 4, as both games have adopted a sort of annual expansion timetable now. Diablo 4's most recent expansion, Lord of Hatred, arrived in April, and Overwatch's expansion-like Reign of Talon relaunch happened in February. It's about time to hear what's next, for Overwatch, certainly.

The backdrop to BlizzCon 2026 is the wide-ranging cuts announced by owner Microsoft earlier this year. Blizzard seems to have been relatively unscathed by this, but it'll be interesting to hear whether there's any protest activity in or around the convention as the weekend unfolds, especially in light of the historic union recognition vote a couple of days ago.

Let's see what Blizzard has got.

Our live coverage of this event has finished.

Good afternoon slash evening! How are you all doing? There's a little under 30 minutes to go until the show begins. Let the excitement build.

Dale says: Lost Vikings Remake when?

Ah, gosh! Fond memories of playing this at a neighbour's house many years ago before Blizzard was the household gaming name it is today.

Dale says: A Starcraft MMO would make a lot of sense. Three factions, each with important figures in the lore, plenty of unit archetypes to make up classes. It would lend itself really well to pvp as well, capturing points to requisition vehicles.

A StarCraft MMO? Goodness! I believe this is broadly what Blizzard was trying to make with Titan - a sci-fi MMO. That was salvaged and became Overwatch of course. I don't think Blizzard will make another MMO again. They are, and always will be, a colossal investment and I don't think it'd ever cannibalise World of Warcraft by doing it.

Kremlik says: Interestingly the 'Classic+' rumours have evolved into it's NOT like OSRS (which is Vanilla with new content) but they're intending on going further back to the RTS age and retelling those stories in MMO form. I'm 'expecting' them to drop payed for classes into D2 and D4 again (without new content), but my eyes are firmly on whatever Starcraft game we end up getting - if it's actually a RTS I'll be surprised (the game done 'in-house' not the Nexon one - that one is more likely to be the RTS)

Oh, interesting. So Classic Plus becomes a Classic take on the stories from the Warcraft 1-3 game - is that what you mean?

It definitely makes more sense of the Nexon involvement if Nexon is taking this MMO spin-off and Blizzard is doing the StarCraft co-op game in-house, although I still find a non-multitplayer game a bemusing concept for Blizzard, certainly given as multiplayer is one of its founding mantras. Multiplayer in a 'more than co-op' sense. But perhaps that's deemed as enough?

We are currently seeing some strange goings-on on the BlizzCon stage. I think that's Darin de Paul dressed up as a waiter there, the voice of Reinhardt in Overwatch. It certainly looks like him. Some people are dealing huge tarot cards on a table, while a keyboard and violin are playing possibly the nicest stream hold-music we've ever had.

I say he's dressed up as a waiter: he has a white tuxedo on. He's more of a very smart person dressed for dinner than the waiter.

De Paul appears now to be knighting someone, albeit with the edge of the blade rather than the flat bit. Darin, Darin. Former Eurogamerer Chris Bratt, who now co-runs People Make Games, is at BlizzCon this year, primarily to follow the Blizzard workers union, but he's also at the show.

First thing the Blizzcon attendees see as they join the queue for this year's show. [image or embed] — Chris Bratt (@chrisbratt.bsky.social) 12 September 2026 at 17:33

We were invited to the show, incidentally, but couldn't make it this year.

CONTINÚA · HISTORIA 03

We're approaching the five-minutes-to-go mark. I visited Blizzard campus earlier this year before the relaunch of Overwatch, and Blizzard president Johanna Faries made a big point of inviting everyone BlizzCon and making it sound like some big things were going to happen there. This was before Microsoft's restructuring of course. But still: I hope for some big things to happen.

Matt Mercer has snuck onto the feed! He's stealing something from the table and generally being sneaky.

Mercer being the voice actor for Overwatch's Cassidy of course, and a central figure in super-mega-popular role-play group Critical Role.

Dale says: I was going through my old comics the other day and there were some adverts for the Justice League fighting game that Blizzard made back in the 90s. I've never played it, but apparently it wasn't great.

Goodness me! I had completely glossed over that. Interesting to think of a time before Warcraft, isn't it?

One minute to go and the music has ramped up considerably. A clock ticks down to the beginning. It's nice for a show to be a live in-person thing, isn't?

The camera feed takes us inside the Anaheim Convention Centre, the clock ticks down, the crowd cheers. A Diablo video plays. Perhaps Diablo is opening the show? There's a lot of screens.

Ah, now Overwatch, so we're montaging. Drums bang. It's a very heroic opening.

Now StarCraft? It is StarCraft. So Blizzard is talking about it again, then. That's a good sign.

HearthStone now - don't forget HearthStone. Lovely production values on that stage, I must say. Lots of big lights, four huge screens. A HUGE cheer for World of Warcraft when it eventually makes it on the screen. Shows the pulling power of WoW still. The whole thing was built on WoW, really.

Johanna Faries - Blizzard president - takes the stage.

She greets the crowd. The crowd roars. "Unbelievable energy in here."

"And the long and winding roads that have read us to today. What a special moment for all of us." Is it?

She's thanking everyone for being there. And people tuning in. "It's deeply moving to look out and see what I see, and be together in this particular way." It's her first time on this stage. It's nice to see her on this stage.

MarcusJ says: No Rock N Roll Racing in the montage.

She's quite emotional. That's nice to see. She's got wonderfully sparkly boots on. She looks a bit like she could be in the Wizard of Oz.

A big speech for her. She says she hopes this weekend is going to serve as an "oasis" for people attending. "A place for us to connect and reconnect." And probably buy loads of really expensive merchandise.

An attempt to endear herself to the crowd I suppose. She's referencing that it's been a while since the last BlizzCon. This one took a lot of work - blood, sweat, and tears.

"I love you." She says to her team mates. It's a very impassioned speech. I'm sure it has been a hard year with the Microsoft restructuring in the background, though I'm not sure how affected Blizzard has been by it.

Blizzard president Johanna Faries gives an impassioned opening speech

This weekend is "jam-packed with goodness" she says. There's so much going on at Blizzard now that they couldn't fit it into this weekend if they tried. A first announcement is coming up.

Heroes of the Storm is returning?

She is pleased to share something from the "nexus" of our hearts. Heroes of the Storm spotted on screen. But what exactly is this?

We see a janitor zombie clearing up. We see Arthas doing Arthas stuff. There's the WoW Midnight baddie. Oh okay, Xal'atath is coming to Heroes and you can play her this weekend.

"To all the HOTS players out there, I see you." She thanks people for "carrying the torch". They may have another new hero on the way in the future?

Netflix is making an animated Diablo series

CONTINÚA · HISTORIA 03

She's moving onto multimedia partnerships now. The words Netflix and Diablo flash up.

They're in development on a new animated series for Diablo with Netflix. I think this had been rumoured in the past. "And Diablo, I promise, is just the beginning, to our Overwatch community, to our Warcraft community, and who knows, perhaps even some of our other universes." There are discussions being had. "I can't spill the beans just yet."

Dale says: They're bringing back Heroes of the Storm? Unexpected.

Right? I thought it had disappeared too. But the way she was talking about it, it sounded like it was still around and they were just adding new heroes to it. Otherwise why not say they were bringing it back? I'm a bit confused.

Dan Hay is coming on stage now. This must be the StarCraft reveal. He used to work on Far Cry at Ubisoft and he's the person said to be in charge of the new StarCraft shooter.

Blizzard announces it's new StarCraft open-world shooter

He's talking about how he saw a Blizzard trailer and it made him want to apply to work at the company so he applied to do just that. He was turned down. I guess this was at the start of his career. "Dreams don't die, dreams don't fade. Dreams are patient. Dreams wait."

So he waited and 25 years later it sounds like he got his shot. The wait had better be worth it, Dan!

His phone rang, it was Blizzard, and "this time, there was an opportunity" to assemble a team to carry the legacy of one of Blizzard's most beloved games. The team stand up in the hall and everyone claps them.

"A team built with one purpose. A team built with one goal. To return to a universe forged in interstellar war."

An open-world shooter where everything is earned... They're here to "reignite" this universe. "We are here to make StarCraft!"

StarCraft returns 2030 - that's a long way away

A gravelly voice of a general giving a speech to his troops. A montage of troops training, one in particular, going through the ranks, earning their stripes, earning their mech suit. It's CGI.

We see them training with a rifle in a hallway, shooting targets. They're welding their suit. It's big and red. In they go.

A drop ship flies to an alien planet and they prepare with their troop to jump out. It's a rousing trailer.

Out they step and there are huge floating aliens ahead of them. The zerg advances, guns blare. A visor goes down. The fighter is lost. Oh! He died, his blood sludges through the drain. That's a nice twist.

We see their badge picked up off the floor and thrown with all the others. Presumably it's a meat grinder as more and more troops come through.

The game is simply called StarCraft.

No other details about this StarCraft shooter just yet. Overwatch director Aaron Keller comes onto the stage in an incredible Overwatch jacket.

He's reminding us that Blizzard is releasing 10 new heroes this year for Overwatch. I think 8 of them have been added so far. We're going to see a new one now.

We're in the icy map of Watchpoint Gibraltar and watching an animation. A big character comes in who looks a bit like Doomfist and seems to fight like him too. Oh, it is Doomfist, it seems. Doomfist lays waste to the soldiers in his way.

There's Reaper. There's Sombra. There's Widowmaker.

Doomfist was ousted as Talon leader recently so presumably they're trying to reinstate him.

Malek86 says: I just can't really get hyped about cinematic trailers anymore, since they are basically just announcements, and we already know those news unless they somehow manage to keep the lid on the project until trailer day (and let's face it, whenever does that happen nowadays?).

I hear you. It was a nice trailer, and I liked how it ended, but I still no next to nothing about the game. And it's so far away!

MarcusJ says: When it said 2030, I assumed that was when it was set. For a second.

CONTINÚA · HISTORIA 03

On the screen, we're seeing more animated Overwatch shennanigans. I've lost track. They're fighting a large mech and Doomfist punches it and takes it down. It's very heroic. Are they here to get someone out of storage I wonder?

Ooh! Someone slim is coming out! Someone tall with white dreads and long fingernails. They put some tech on and immediately they're armoured. They're a sort of techno vampire, and now they're younger again, too. They've got a cain, though, and seem to control dark bat-like powers.

New Overwatch hero Doctrine revealed, a techno support vampire

Ben Bell and Miranda Moyer from the Overwatch team come out.

Doctrine, I think this new character is called. Support hero with a sceptre who can rush through battle shrouded in darkness and their drones can speed enemies up. They have an infuse ability that transforms their next ability. Oh they are a vampire! They have have mechanical bats.

Doctrine - I'm not sure on the spelling - comes next month. Doctrine is playable at BlizzCon now. Doctrine's Hero Trial will start for all players as soon as the opening ceremony concludes.

Roadhog is getting a rework! He's going to be able to help out his team. And Sombra is becoming a support!

It sounded like there's a new map coming in Season 5 next month as well, and some other things I glossed over slightly because I was hunting for the StarCraft trailer - which I found!

They're doing a live Overwatch TTRPG on stage tomorrow, which has been written by Matt Mercer - so that's why he's there! It's a one of a kind story built just for this weekend.

Overwatch's Aaron Keller is talking about Overwatch merch - including his flashy jacket - helping the Make a Wish foundation. Ben Bell is saying this has been the biggest year in Overwatch history. I think he's the exec producer.

Keller is sneaking in a plug for the big new announcement in Feb. A new story, a "fresh set of heroes". "We are aiming for peak Overwatch." Some new systems mentioned.

Dale says: One thought - with Starcraft being in 2030, and Xbox recently saying Blizzard is Xbox's most profitable studio, could this give us an idea of when Microsoft is thinking of launching the next Xbox? I don't think it'll be quite that late, but with the delayed start to this gen due to the pandemic, the slower progress of graphics tech, and the hellscape of AI and what it's done to tech pricing and is likely to do for the next couple years at least, I imagine that next-gen consoles could be getting pushed back a lot further than what was originally expected.

I'd say it was well within the bounds of possibility it'll be a Project Helix game.

We're moving onto Diablo now, by the looks of things. A Switch 2 announcement?

A montage of all the games, and people cheering - presumably for the game - is flashing by on screen.

This is the 30th anniversary year of Diablo, of course.

Tiffany Wat and Brent Gibson from the Diablo team come onto the stage.

Wat says she's been to every single BlizzCon event, which is impressive. They're doing a "Horde" and "Alliance" callout now. Wat asks the audience if anyone else has been to every BlizzCon, and a couple of people answer.

Probably not the response she was after, but I'm not surprised - it's an expensive endeavour!

Deckard Cain returns to Diablo 4 in triple-prime-evil season launching next week

They're flexing their Diablo histories, and they sound like they've been playing the series for years.

Since 1996 more than 130 million players have played a Diablo game, apparently. That's quite a lot. Reinforcing the Diablo Netflix animated series announcement.

Oh "surprise" mentioned! And the screens go crackers like something is going to happen. But... it doesn't.

"We love a good surprise," Gibson says. He's referencing bringing the Warlock to three Diablo games at once, which was impressive. In a few days - on 15th September - Season of Hell Legacies, I think he says, launches, celebrating 30 years of Diablo.

Decard Cain is returning.

Diablo 4 Switch 2 confirmed - and it's out next week!

CONTINÚA · HISTORIA 03

We'll face all three prime evils - Bael, Mephisto and Diablo - and choose which evil we want to embrace. This choice will reshape the game around us.

We're also getting new loot themed around the history of Diablo. It sounds cool but also slightly anticlimactic if that's the surprise they had for us.

"Mooooving on." Oh, cow level?

Diablo's Joe Shely comes on stage with a Switch 2!

He's officially announcing that the D4 Age of Hatred Collection is coming to Switch 2 on 15th September alongside the Season of Hell's Legacy.

Spawn's Todd McFarlane is at the show because Spawn is coming to Diablo Immortal.

The Amazon class is coming to Diablo 4

The Amazon class from Diablo 2 is coming to Diablo 4! This is the class that's from Skovos.

The Amazon will wield the bow but also a brand new weapon for Diablo 4: the javelin. The Amazon "class pack" will arrive first-half of 2027. So it's paid DLC.

There's another announcement. They're also ready to look beyond the Age of Hatred. We're going to see the next era.

Shely: "For 30 years, Sanctuary has stood on the edge of oblivion." Heroes have always pushed it back. "Until now."

Blizzard announces Diablo 5!

Holy shit that was an announcement for Diablo 5! It's coming in spring 2029.

For the first time, we won't be fighting to stop Diablo from taking control of the world, because he will have already taken it. We will be fighting in a fallen world. There's a panel later at BlizzCon where they'll be detailing the evolution more.

Good grief I have to catch my breath after that.

Nathan Lyons-Smith from the HearthStone team comes on stage to give us a breather. Brendan Sewell from the HearthStone team is there too.

We're getting a trailer for a new expansion.

Dale says: There seemed a distinct lack of enthusiasm for the crowd with that Diablo V announcement. More... confusion? Does this mean we're not getting another D 4 expansion?

That's a very good question. I would assume not.

HearthStone's getting a new expansion in October based around Old Gods

Distracted a little there. This next expansion goes back in Warcraft history to the fight between the old gods that shaped Azeroth to begin with. There might be some juicy lore in this.

Reign of the Black Empire it's called, and it's got a new Assemble keyword that lets you merge two cards together. It pulls from a pool of more than 250 cards.

The expansion launches 20th October.

Rogueywon says: I thought the second expansion had pretty much wrapped up Diablo 4? The story felt done.

Yeah, so I guess the thinking was do we do a new storyline or jump to a new game? It does seem like a swift jump though. There were 11 years between Diablo 3 and Diablo 4.

Tavern Brawls are getting bigger. 2v2 HearthStone! That's a nice idea.

One more announcement. It's a pandaren - we see them in a trailer. They're doing Kung-fu panda stuff. Ooh the monk is arriving as a new class in HearthStone in March 2027.

Flexibility is apparently a key monk selling point. Oh and that's all we get to know.

They're recapping now and getting ready to hand this segment over, presumably to World of Warcraft. A Classic Plus announcement coming?

World of Warcraft boss Holly Longdale comes out, dressed in a wonderful WOW-like cosplay gown! Very fetching.

CONTINÚA · HISTORIA 03

She asks if there are any WoW players out there and the audience goes bananas. The Alliance scream was louder, I'm sorry to say.

"We're going to light a fire that's going to burn for decades, and it starts today," she says. "We're about to launch a kickass year of Warcraft." We're starting with the Worldsoul Saga, and here's Ion Hazzikostas to tell us about it.

Midnight Eclipse is the next big WoW patch

A recap on how Midnight has gone, and how they've stayed tightlipped about where the story is going. And it sounds like now they can talk about it. We're at the mid-point of the Worldsoul Saga story.

For a while, the narrative has been about moving chess pieces into place, getting ready for the endgame, and they're just about done with that now. Now it's "all gas, no brakes". The next major content for Midnight is Eclipse. Patch 12.2.

Xa'latath now hovers above her objective and "it's about time we confront her directly". Her objective is... Stormwind? We see a city gates on screen. I'm not familiar with stinking Alliance lands but that looks like a major city.

Those doors sure look like Stormwind to me. Xa'latath rocks up and says for the gates to open. A big holographic protector guards the door. Oh, it's a titan, it seems. She sends her shadowy power against it. The doors break open and in she goes. Okay, it's not Stormwind, it's somewhere a giant glowing orb is. The Worldsoul, presumably.

Ruh roh. I don't think that's good for anyone.

Reference to the next expansion The Last Titan. But they can't get into it without spoiling things to come in Midnight. Hazzikostas is talking about The Last Titan being the culmination of 20 years of work and how it'll bring the latest chapter of World of Warcraft to an end. It'll be interesting to see how they can top it after that. Or whether they'll do something else with WoW.

Early next year, they'll share more information, after Eclipse. But we're getting a glimpse.

A snowy tundra. A glowing tower. This feels very Lich Kingy. The ground is shaking as something colossal approaches. Something so big we can't see it all in one. It's a giant robot thing with laser guns on its shoulders.

The Last Titan is coming in 2027.

Warcraft 3 is getting a new campaign for the first time in decades

"We are putting the war back in Warcraft," says Longdale. She intros the Warcraft 3 team. Is this going to be the thing that was rumoured?

A trailer plays showing two armies clashing. Humans versus orcs, as always, it seems. But then a floating necropolis arrives and the trailer cuts to black.

WarCraft 3 Reforged: Forsaken Kingdom. It's a new campaign for Warcraft 3!

We're going to experience the fall of Lodaeron and how the Undercity became what it did.

The new Warcraft 3 campaign is out today!

It's got more than 30 hours of gameplay, a trailer tells us. There's a Definitive Edition graphical update being applied to Warcraft 3 Reforged as well. You can select bigger groups of units now, the map editor is being improved.

It's a shadow-drop! The new campaign launches today.

"And we ain't done yet," Longdale sales.

"It's time to talk about something new. Maybe address some of the rumours out there.

"What if we take vanilla and really plus it up?!"

This must be Classic Plus!

Classic Plus is World of Warcraft Forever!

On screen we're seeing the classic WoW intro cinematic with the dwarf on the snowy mountain. But a wisp flies near by. This is a remade cinematic, it looks like. They follow it in a different direction - that's pertinent.

Blizzard presents... We see a large field before them. The dwarf picks a golden flower. The bear rolls on the ground. Is this supposed to denote a graphical do-over for the whole world?

CONTINÚA · HISTORIA 03

The Dalaran globe - it opens! There's a city inside.

The wisp dives down into it. There's an undead character in there. The dwarf confronts it. The battle.

The wisp flies back out to the world tree. The dwarf follows it to it. There are huge remains of titans there, it looks like. The dwarf bows to the wisp.

We zoom out and see more wide shots of the world as a hand reaches out.

World of Warcraft: Forever

We don't have long to experience it because... It launches in seven weeks, on 4th November. Not quite a shadow drop. A clock ticks down on screen. Beta starts this Thursday.

Forever is "your new permanent home". "It's a new beginning that never ends." They're giving us another way to play WoW. Not console?

Instead of one big heroic story, we'll carve our own path, apparently. I don't know what that means. There's no rush here, it's the journey that counts. Again, I'm not sure what that means.

There's going to be a lot to discover. It sounds like it might be a mobile version? She's talking vaguely.

"This is a new opportunity to get back to..." the heart of what makes MMOs "so damn special", Longdale says. Yes but what is it!

She's still skirting around describing exactly what it is other than talking about it superlatively. We're seeing a trailer!

We fly over the sea, above a forest. Orgrimmar... We're seeing snapshots of areas around Azeroth. It looks like World of Warcraft.

New zones. Mount Hyjal. Zephra's Isle. Riverglades. Expanded original zones. New dungeons. New raids. 10 and 20 player raids. New skills and talents. New race and class combinations. New playable race - the Skyborne. New battleground Darkspear something or other. 1000 new quests. New items and rewards. New professions content. New reputations. Account-wide perks. SD/HD character toggle. Updated world visuals.

So it's an expanded version of World of Warcraft, remastered and enhanced. Cool!

WoW Forever is an expanded and remastered version of vanilla WoW, that'll lock at level 60

It's essentially year one of vanilla WoW. "But the future is untold. We may see stories that could have happened, and some that didn't happen at all." So it might expand in different ways.

It's going to stay at level 60 "indefinitely". "We don't want to race ahead and leave our accomplishments, our gear, and our friends behind. That said, we will progress in other ways and get updates as we go." They say it's all based on what they've been hearing from the audience.

The crowd is chanting Holly's name. I think this must be where the opening ceremony is going to end. It's been a great show! Those are some big announcements. Overwatch was actually the relative low point for once.

This is where opening ceremony ends, Longdale says. She's been great on stage. "And now, it's time to play! Have an absolutely badass BlizzCon!" She fumbles her words and it's very endearing. And that's it! What a show.

That's it for our live coverage tonight. Thanks for joining us!

Nightdive confirms Thief Remastered's leaked new campaign, The Tarnished Mirror, with a November reveal date

Nightdive Studios has officially confirmed The Tarnished Mirror, a new campaign for its upcoming Thief: The Dark Project Remastered, days after the name leaked through a mass Steam achievements leak.

The studio broke the news with a very tongue-in-cheek, self-aware teaser video about how the reveal actually came about, which you can see below:

As spotted by PC Gamer, the teaser trailer opens by acknowledging the flood of leak speculation, then closes on Garrett character art from illustrator Alexandru "Dominus" Negoita and the new Tarnished Mirror logo. A full reveal is promised for 2nd November.

In the teaser, Garrett says: "Huh...not so secret anymore, is it?"

Nightdive stopped short of detailing what, exactly, The Tarnished Mirror actually involves, beyond confirming its existence and name. That's presumably what the November reveal is for.

Nightdive first announced Thief: The Dark Project Remastered back in June, promising visual upgrades, quality of life improvements like a weapon wheel and mission selector, and 4K/120fps support.

Anyone who grew up with an NES, Mega Drive, SNES or early PlayStation probably remembers what owning a game looked like. It had a box, a cartridge or disc, sometimes a thick manual and a permanent place on a shelf. You could lend it to a friend, trade it in or pull it out years later and try it again.

That idea of ownership has changed. Digital libraries are convenient, yet they also depend on accounts, storefronts and platform support. Xbox's latest disc-to-digital test has reopened an old question in a very modern form: what does it actually mean to own a game?

How Entertainment Moved From Ownership to Online Access For players raised in the eighties and nineties, a game was usually something they physically possessed. Even as consoles became more advanced, the relationship remained simple. If the cartridge or disc still worked and the hardware could read it, the game was yours to play. Access did not rely on an active account or a rotating digital catalogue.

That permanence contrasts sharply with how modern leisure industries operate today. Across the board, core products have undergone complete digitisation. Music moved from CDs to streaming platforms, films left the physical shelf for subscription libraries, and traditional venue-based betting shifted to digital hubs where operators like NetBet consolidate their game libraries and player promotions within a single account ecosystem.

This shift to digital brings undeniable convenience. You can log in, access a huge catalogue of content, and manage your profile instantly. However, it also alters the fundamental nature of access. A boxed game takes up space and requires working hardware, yet it offers a degree of independence that an entirely account-reliant service simply cannot replicate.

Xbox Is Trying to Give Discs a Digital Second Life Xbox announced on 26 August 2026 that Insiders would begin testing a feature allowing supported Xbox One and Xbox Series X discs to unlock a digital entitlement. The original disc continues to work, while the entitlement can add access to features such as Xbox Play Anywhere and cloud gaming where supported.

CONTINÚA · HISTORIA 05

The idea stands out because it tries to keep the disc useful while adding some of the flexibility players now associate with digital libraries. Xbox has also framed the feature as part of its broader approach to preservation.

For anyone who remembers swapping cartridges at school or buying second-hand games from a local shop, the appeal is easy to understand. The object itself has not been made irrelevant. Access still relies partly on Xbox infrastructure, though, so the disc does not become a completely platform-independent archive.

PlayStation Is Moving Further Away From Physical Releases Sony is heading in a different direction. It confirmed in July 2026 that disc production for new PlayStation releases will end from January 2028. Games released before that date are not affected, while new titles after the cutoff will move to digital formats.

That shift changes the collecting side of gaming as much as the buying process. Boxed games can be resold, lent, displayed and collected. Packaging and manuals also became part of the identity of many older releases, especially in the cartridge and early-disc eras. Original boxes and printed material can matter almost as much as the software itself, which is why complete examples remain such a big part of retro gaming collections. A digital-only future removes much of that ritual. Buying becomes faster, but there is less to pass on, trade or discover years later in a second-hand shop.

Old Games Show Why Physical Copies Still Matter Older games already show what can happen when commercial access disappears. A Video Game History Foundation study found that only about 13% of classic games released in the United States between 1960 and 2009 remained commercially available. Its study of classic game availability shows how quickly titles can vanish once publishers, storefronts or hardware move on.

For some games, an aging cartridge or disc and a working console may still be the most straightforward legitimate way to play. Original hardware can matter too. Controllers, display technology, loading behaviour and small technical quirks can all change how an old game feels compared with a modern rerelease.

Old media has its own weaknesses. Discs scratch, batteries fail and aging consoles need repairs. Collectors still have something tangible to maintain, though, rather than relying entirely on continued access to a digital service.

Physical and Digital Ownership Now Serve Different Purposes Digital gaming has obvious advantages. Buying a game takes minutes, storage is simpler and a library can travel with an account across supported devices. For plenty of players, that convenience matters more than having another case on a shelf. A boxed copy serves a different purpose. It supports collecting, lending and resale, and it can keep older games accessible after their original commercial moment has passed. That difference is especially noticeable to people who grew up when every game had to be brought home.

Xbox's latest experiment sits somewhere between those two habits. The disc remains part of the experience, while the digital entitlement adds the sort of convenience modern players have come to expect. For anyone who grew up blowing dust from a cartridge or carrying a stack of discs to a friend's house, that distinction still means something.

Retro games continue to attract players despite the rise of photorealistic graphics, expansive open worlds, and cinematic storytelling. Classic platformers, arcade games, fighting titles, racing games, and RPGs may look simple compared with modern releases, but their appeal goes far beyond visuals.

The secret is gameplay . Retro games were often designed around challenge, discovery, repetition, competition, and satisfying controls. These elements can remain enjoyable regardless of how old a game becomes.

Gameplay Over Graphics Hardware limitations forced retro developers to focus on mechanics rather than visual spectacle. Without the ability to create enormous worlds or highly detailed characters, developers had to make simple ideas entertaining.

A platformer might rely on running, jumping, and avoiding obstacles. A fighting game could center on timing and combinations, while a racing game might offer only a handful of tracks but make every corner meaningful. These straightforward mechanics created a powerful gameplay loop. Players understood the objective, attempted it, failed, learned from their mistakes, and tried again. That process made improvement itself part of the fun.

Difficulty Encouraged Mastery Retro games are famous for challenging gameplay. Limited lives, difficult bosses, scarce checkpoints, and increasingly complicated levels were common.

Instead of immediately reducing difficulty, many classic games encouraged players to adapt. An enemy's movement could reveal a predictable pattern, while a difficult section could become easier after learning the correct timing. Failure therefore became part of the learning process. When players finally defeated a challenging boss or completed a difficult stage, the accomplishment felt meaningful because they had developed the skills required to succeed.

Repetition Became Replay Value Modern games often keep players engaged by providing enormous amounts of content. Retro games frequently achieved replayability differently.

CONTINÚA · HISTORIA 06

Players repeated the same stages to improve their performance. They memorized enemy locations, learned shortcuts, improved their timing, and gradually became more efficient. A level that initially seemed impossible could eventually feel almost effortless. This demonstrates why retro games can remain entertaining decades after release. Their replay value does not always depend on additional content. Instead, it comes from mastery and improvement.

Simple Controls Can Be Deep Another defining feature of retro gaming is its straightforward control schemes. Classic controllers typically had fewer buttons than today's devices, yet developers managed to create surprisingly deep gameplay.

Limited controls encouraged designers to make every action meaningful. Movement, timing, positioning, and combinations could transform a small number of buttons into complex strategies. This highlights an important lesson: complexity does not automatically create depth. A game with numerous systems can become overwhelming, while a title built around a few responsive mechanics can remain engaging for years.

Music and Sound Create Memories Retro games also demonstrate that memorable experiences are not purely visual. Limited hardware encouraged composers to create distinctive melodies using relatively simple sound systems. Many of these tunes remain recognizable decades later.

Sound effects also provided immediate feedback. A particular sound could signal collecting an item, taking damage, defeating an enemy, or reaching a new area. These repeated audio cues became closely connected with gameplay and nostalgia, helping classic titles establish strong identities.

Discovery Made Games More Exciting Retro games often provided less guidance than modern titles. Players were expected to experiment and discover mechanics independently.

Hidden passages, secret characters, bonus areas, and unusual shortcuts encouraged exploration. Before online walkthroughs became commonplace, discovering a secret could feel like finding something genuinely special. Players also shared discoveries with friends, creating conversations and gaming communities around secrets and strategies. That sense of discovery helped relatively small games feel much larger than they actually were.

High Scores Created Competition Arcade games introduced another powerful engagement mechanism: competition. A game did not necessarily need a lengthy story to encourage repeated play. Players could compete for high scores against friends, family members, or strangers.

Beating a personal record created a reason to return. There was always another score to reach and another performance to improve. This simple system helped turn short gaming sessions into long-term challenges.

High-score tables also gave players a visible way to measure their skills. Seeing another player's name above theirs could encourage another attempt, while achieving a top position provided a sense of accomplishment. This competitive structure transformed simple games into personal challenges and social contests, proving that replay value could come from performance rather than constantly adding new content.

What Modern Games Can Learn Nostalgia certainly explains part of retro gaming's popularity, particularly for players who grew up with classic consoles. However, younger audiences can also appreciate older games because strong design does not necessarily age.

Modern technology allows developers to create incredibly detailed environments and realistic characters, but impressive graphics alone cannot guarantee an engaging experience.

Retro games demonstrate the importance of responsive controls, meaningful challenges, clear objectives, and rewarding progression. They also show how limitations can encourage creativity, forcing developers to make every mechanic purposeful rather than adding features simply because technology allows them.

Even someone exploring modern digital gaming platforms such as JiliPH on GameZone can recognize this principle: engaging gameplay does not always require complicated presentation.

The mechanics need to give players a reason to continue. A well-designed experience should create curiosity, reward experimentation, and make progress feel meaningful. These principles remain relevant today, proving that successful game design depends on more than graphical power.

CONTINÚA · HISTORIA 06

Why Retro Games Remain Relevant Retro games remain compelling because they understand a fundamental principle of gaming: graphics attract attention, but gameplay creates lasting engagement .

Classic titles used challenge, mastery, discovery, competition, repetition, music, and responsive controls to keep players invested. Their technological limitations forced developers to prioritize what players actually did. That is why an older game can still feel satisfying decades after its release.

Whether someone revisits a classic cartridge, plays a retro-inspired indie title, or explores a modern platform such as JiliPH on GameZone , the underlying appeal remains similar. Players want experiences that challenge them, reward improvement, and make them curious about what comes next.

Ultimately, retro games prove that great game design can outlive hardware generations. Their graphics may show their age, but their ability to challenge, surprise, and entertain remains timeless. JiliPH on GameZone and other modern gaming experiences can benefit from the same lesson: visual presentation may attract players, but engaging gameplay is what keeps them coming back.

German players used to accept slow card checks, bank delays, and messy statements as part of online play. That patience is fading. On licensed gaming sites, payment choice now shapes trust before a slot loads or a live blackjack table opens. E-wallets, prepaid vouchers, and bank-linked wallets give users cleaner limits, less friction, and fewer awkward bank entries. They also fit Germany's stricter rules after the 2021 State Treaty, where identity checks and spending caps changed the rhythm of deposits. A missed payout email at 11 p.m. becomes a support ticket by breakfast. For comparison, popular gambling websites such as <https://revolutcasino.de> rate Revolut casinos by withdrawal speed, app control, and how clearly fees are shown. The shift is practical rather than flashy. A player who deposits €25 on Friday night wants the balance to appear in seconds, not after a bank security loop that breaks the mood. Small details decide loyalty.

Wallets turn payment choice into product design An e-wallet is no longer a side button near Visa and Mastercard. It is part of the product. Revolut, Skrill, Neteller, PayPal alternatives, and Paydirekt-style bank flows all promise one thing: the gaming account should feel separate from the household current account.

This separation matters in Germany. Players see limits inside apps, freeze cards, and track a €10 test deposit without opening a bank portal. Operators like it too because failed card transactions cost time and support hours.

CONTINÚA · HISTORIA 07

Offers are changing with the rails. Some sites attach exclusive promotions for online casino mit Paydirekt with instant deposits on weekend campaigns, while others mark e-wallet withdrawals as a premium service. One clear payment label can beat a banner ad.

Prepaid vouchers bring a different habit. Shoppers buy a code at a kiosk, petrol station, or online reseller, then enter it like a gift card. For people who dislike sharing card data, fast deposits through Cashlib online casinos listed in Germany feel safer and easier to budget. The cap is physical: once the voucher is spent, play stops unless another code is bought.

German rules made speed feel different Germany's legal market changed payment behavior because the rules are visible at the checkout. The €1,000 monthly deposit limit, central exclusion checks, and account verification all sit between the player and the first spin.

So speed now means more than instant money movement. A good payment flow has to show the limit, confirm the person, and return the user to the game without three broken tabs. Clumsy design feels suspicious, even when it follows the law.

E-wallets help because much of the profile work already happens inside the app. Vouchers help for the opposite reason: they keep the deposit simple and capped. Banks still matter, yet their role is quieter. The gaming site gets paid; the player gets a neat line item instead of a card trail with merchant names that make no sense.

That privacy point is not shady. It is ordinary. Plenty of adults prefer a cleaner bank statement.

Vouchers suit players who set hard stops Prepaid codes are old-fashioned in a useful way. No credit line. No rolling subscription. No stored card.

A voucher turns a deposit into a fixed purchase, which suits casual players who treat gaming like a cinema ticket or a €20 Bundesliga bet with friends. The limit sits in the code, not in willpower. That makes overspending harder at the exact moment a near miss on a slot is pushing for another try.

There is a trade-off. Voucher withdrawals are rarely as neat as deposits, so winnings usually need a bank transfer or wallet later. Fees also differ by seller, especially for smaller codes. A €10 voucher with a service charge feels bad before play even starts.

Still, the appeal is obvious at the counter. Cash in, code out. Done.

E-wallets win on repeat use Regular players care about the second and third deposit more than the first. After verification is done, an e-wallet keeps the loop tidy: tap, approve, return.

That rhythm helps mobile play. A person on an S-Bahn platform will not copy IBAN details or wait for a card text message that arrives two minutes late. Face ID and app approval fit the setting.

Withdrawals are the real test. If a platform advertises same-day cashouts but pays e-wallet users on Monday after a Friday request, trust drops fast. German users read payment pages closely because licensing rules already slow some steps. A site that states "under 24 hours after approval" and meets it earns repeat deposits without shouting about jackpots.

What platforms should fix next The next payment battle is plain language. Casinos should show minimum deposits, fees, withdrawal routes, and cut-off times on one screen before registration. Tiny footnotes create angry chats.

They should also stop treating vouchers and wallets as interchangeable. A voucher user wants spending control and privacy. An e-wallet user wants speed, records, and quick payouts. The same bonus copy will miss one of them.

Support teams need better scripts too. "Pending" is not an answer after 18 hours. A better message says which check is running, who controls it, and what proof would shorten the wait.

For German platforms, payments now sit beside licensing, odds, and game choice. The simple next step: test every deposit method with €10, then publish the real timings. Would a player believe the page after trying it?

Crítica de Prácticamente magia 2, una desangelada secuela que no encandila con su nostalgia

Crítica de Prácticamente magia 2, una secuela tardía con Nicole Kidman y Sandra Bullock como grandes protagonistas. Estreno el 11 de septiembre.

GAMING

Crítica de Prácticamente magia 2, una desangelada secuela que

Prácticamente magia 2 deja sin palabras, pero no por los motivos adecuados: se percibe muy pronto como una película fallida en la que hay graves problemas de planificación y de ejecución. Si empezamos por el primer punto hay que tener en cuenta que la película parte de una idea sencilla para alargarse hasta los 130 minutos de metraje.

La premisa está tan estirada y manipulada que los pocos epílogos de su coda final resultan estomagantes. Es indudable

que uno de los principales puntos de interés es reunir de nuevo a las hermanas Owens, Gillian y Sally: Nicole Kidman y Sandra Bullock parecen habérselo pasado bien en un universo ficcional en el que se sienten cómodas, de hecho, ejercen además productoras del proyecto.

Pero es que el reparto también cuenta con las veteranas Stockard Channing y Dianne Wiest. Las sorpresas vienen por los nuevos fichajes, las hijas de Sally, roles de los que se hacen cargo Maisie Williams (con un exiguo papel que no le pega demasiado) y Joey King, más presente en la cinta.

Entre los nuevos intereses amorosos de las protagonistas encontramos asimismo a Lee Pace (Fundación) y a Xolo Maridueña (Blue Beetle). La cuestión está en que el tono de Prácticamente magia 2 (como sucedía ya en la primera entrega) es muy voluble: pasa de la comedia al drama y del drama a la intriga en un abrir y cerrar de ojos.

A nivel técnico, tiene todos los problemas que se puedan llegar a imaginar, desde fallos de raccord, hasta problemas de montaje, efectos especiales de baratillo y planos que no están siquiera enfocados. Ni siquiera siendo muy permisivos los espectadores pasarán por el aro con facilidad.

De vuelta a casa ¿No tienes reciente un visionado de Prácticamente magia? No te apures, porque su secuela arranca recordando el origen de la maldición de la familia Owens: las mujeres del linaje no pueden enamorarse, porque si lo hacen sus parejas están abocadas a un trágico desenlace.

Cuando enterró a su segundo marido, Sally renunció a la magia y decidió criar a sus dos hijas al margen de su poder. Antonia y Kylie son tan distintas como las propias Gillian y Sally. La primera está a punto de convertirse en una brillante doctora mientras que la segunda, además de cursar sus estudios, ha encontrado al hombre de su vida: Gideon. Una vez que su relación alcanza un nuevo nivel, la desgracia se cierne sobre él y es víctima de un atropello que lo deja en coma. Esto propiciará que Kylie descubra la maldición y emprenda un viaje a contrarreloj al origen mismo de su familia, en Inglaterra, donde una antepasada fue quemada en la hoguera.

La finalidad última es salvar la vida de Gideon y su única pista, un misterioso libro cuya información más relevante está sellada con magia. Sally tendrá pues que "desbloquear" sus poderes para salvar a su hija y a su prometido antes de que sea demasiado tarde.

CONTINÚA · HISTORIA 08

A pesar de querer ser una cinta de relevo generacional, Prácticamente magia 2 deja con ganas de ver más a las veteranas, llega algo tarde para las titulares y da la sensación de no ser capaces de "pasar el testigo" a las nuevas incorporaciones, carentes del carisma de las anteriores.

El guión va dando tumbos con serios problemas para avanzar en la medida en que no tiene demasiado que contar ni sabe con qué rellenar tanto espacio. A los diálogos les falta chispa, a la película en general empaque visual y solo justifica su existencia por la pura nostalgia que, en esta ocasión, no está a la altura.

Quizás habría encontrado cierta redención ahondando en el humor, que es el terreno en el que parecen moverse con más soltura los personajes y uno de los pocos puntos de interés de una película que por lo demás se antoja interminable. Es probable que solo le encuentren la poesía los amantes acérrimos del cine de los 90, que se sentirán de nuevo cómodos en la sala por visitar un universo que les resulta confortable.

El resto del espectro de audiencia tiene papeletas para salir escaldado del visionado.

PlayStation no se recupera

Hoy nos hemos levantado con uno de esos anuncios impactantes. Hideo Kojima confirmaba que, el pasado mes de junio, PlayStation puso fin a su colaboración en Physint, "el Metal Gear de nueva generación", que lejos de cancelarse ha acabado encontrando nuevo editor en Xbox, con quien ya trabajaba en exclusiva con OD, su juego de terror.

Physint iba a ser una de las grandes exclusivas de PS6; de hecho, en primavera salieron nuevos detalles del desarrollo. Pero este volantazo trae de la mano unas implicaciones bastante serias, ya que Metal Gear Solid es, para muchos jugadores, un título clave en la historia de la PlayStation.

Y su cancelación, es como otra señal más de que las cosas no van todo lo bien que deberían. Un sutil detalle de que algo no va bien ha sido incluso la comunicación, que ha sido bastante extraña: Sony ha intentado que pareciera algo de mutuo acuerdo, pero Kojima ha dejado claro que ha sido algo que ha venido 100% por parte de PlayStation.

El resultado es el mismo: Physint ya no sucederá en PlayStation. Y es un "ya no", que se suma a la larga lista de tropiezos que Sony está dando en la actual generación, y que hace que muchos nos estemos preguntando qué está pasando en los cuarteles generales de PlayStation, y si hay alguien al volante. "Ya no" es solo el fin del formato físico, que sin duda, va a ser un mazazo enorme para la industria en su conjunto, y para los coleccionistas en particular (por mucho que digan, el físico sigue vendiendo en Europa, y para muestra, las ventas de Metal Gear Solid Master Collection V2 en España, más físicas que digitales).

Más bien, son todos y cada uno de los pasos que ha dado en esta generación, que demuestran que, quienes toman las decisiones, casi siempre trajeados, puede que sepan mucho de números, de excels y hojas de cálculo... pero no lo suficiente de videojuegos para liderar una de las compañías más importantes de este sector.

Si repasamos algunos de sus tropiezos en esta generación, quizá no podamos ni imaginar la infame cantidad de dinero que han tirado en quimeras y apuestas que, cualquier jugador con dos dedos de frente, hubiera vaticinado que se la iban a pegar. Puede que haya sido ese "desangramiento" financiero el que ha terminado con el apoyo a Kojima Productions; eso, o los dos millones vendidos de Death Stranding 2, con los que PlayStation quizá no ha recuperado lo invertido.

CONTINÚA · HISTORIA 09

O ambas. Algunos de estos tropiezos pueden parecer hasta anecdóticos, o literalmente una chorrada, pero fueron dando pistas de que algo estaba cambiando. Repasemos algunas de las jugadas, aunque están puestas de "memoria", sin orden cronológico: El lanzamiento de PS VR2 y prematuro abandono por parte de tus estudios en menos de un año, Vender el soporte vertical para la consola de manera independiente, Forzar a tus estudios a hacer juegos como servicio durante toda la generación de PS5, Cancelar la inmensa mayoría de juegos como servicio (God of War, The Last of Us...), con la consiguiente pérdida de dinero, Lanzar y retirar Concord en 15 días, Comprar Bungie, para acabar poniendo fin a Destiny y cerrar la puerta a Destiny 3, Comprar Bluepoint ponerlos a hacer un juego como servicio en lugar de remakes, para luego cerrarlos, Cerrar Japan Studio, cuna de obras maestras como Shadow of the Colossus, Patapon o Gravity Rush, Fichajes estrella, como Jade Raymond o Jason Blundell, cuyos estudios aun no han lanzado un juego, Naughty Dog no ha lanzado ni un solo juego original en esta generación, solo remasters de títulos de la anterior, Fin de las exclusivas PlayStation en PC, El fin del formato físico a partir de 2028, Y ahora, perder a Kojima Eso, a modo de resumen rápido, sin ser exhaustivo, que seguro me he dejado cosas.

Ni tan siquiera entro en decisiones que vienen forzadas por el contexto global, como las subidas de precio de las consolas por el aumento de costes de los componentes (como la RAM), o el lanzamiento de versiones más caras y potentes de la consola como PS5 Pro, que tienen su público.

Hablo más de decisiones que vienen de la cúpula, de los que marcan el paso, y que en estos últimos 6 años parecen no haber dado ni una, encadenando unas malas decisiones tras otras. Hasta Jim Ryan parece bueno (y eso que tiene parte de culpa en la situación actual), pero la sensación de fondo es que no hay una visión, una línea que seguir.

Lo único claro es que Japón le ha dado las llaves del negocio a Estados Unidos, quienes han impuesto su visión al resto de divisiones, y ha reducido a las divisiones japonesa y europea a un mero chiste, sin margen de maniobra, si lo comparamos con lo que fue en tiempos pre-PS5.

Y creo que ahí radica parte del problema: que PlayStation ha perdido esa esencia y sus raíces japonesas, las que fueron el motor de la compañía en sus generaciones más brillantes. Y de ahí, las actuales decisiones... ¿Salirse del mercado de las portátiles cuando Nintendo Switch ha arrasado con su concepto, solo porque PS Vita tropezó?

¿Abrazar los juegos como servicio en busca de una quimera y un éxito que solo consigue un juego de cada mil?

¿Perder el precioso tiempo de tus estudios más reputados haciendo precisamente eso, juegos en los que no están especializados y con un alto riesgo? ¿Dónde están los juegos exclusivos (uno o dos al año no son suficientes), las alianzas clave con estudios externos, los indies que eligen PlayStation por las facilidades que tenían en el pasado?

¿Dónde quedó la innovación, las apuestas arriesgadas en campos como el control (EyeToy, Move...) y la capacidad para sorprender? Pero, sobre todo, ¿dónde quedó eso de escuchar a tus jugadores? En cada uno de estos tropiezos, la comunidad ha alzado la voz dejando muy claro qué es lo que quiere, y lejos de captar el mensaje, se ha seguido insistiendo en vías y opciones que no es lo que la gente pide.

Cuando me preguntan qué generación de PlayStation prefiero, siempre digo que las dos primeras, esas en las que cualquier juego y género tenían cabida, en unos tiempos en los que hubo una explosión de creatividad, en parte alentada por la propia PlayStation. De aquello hace 30 años, y ahora las cosas pintan más grises... pero la historia nos ha enseñado que todo es cíclico.

PlayStation todavía tiene tiempo de corregir su rumbo: solo tiene que escuchar.

There's a quiet rebellion happening in our living rooms, sheds, and local parks. It's not about loud protests or dramatic statements, but rather the gentle click of knitting needles, the focused silence of a chess game, or the satisfying thwack of a well-hit ball. After years of being glued to screens, many of us are rediscovering the deep joy of analogue hobbies . We're trading digital notifications for real, tangible experiences.

This isn't just about nostalgia; it's a conscious choice to engage our hands and minds in ways that endless scrolling simply can't match. It's about creating, learning, and connecting with something physical in an increasingly virtual world.

Screen Time Fatigue Is Real Let's be honest: our eyes, brains, and thumbs are exhausted. The constant stream of information, the pressure to always be available, and the endless scroll have led to a collective feeling of digital fatigue. This isn't just a feeling; growing digital burnout is a well-documented problem. Our minds aren't designed to process this much data, and the result is often anxiety, poor sleep, and a feeling of being disconnected even when we're constantly online.

Stepping away from the screen to dive into an analogue hobby offers a much-needed mental reset. It lets your brain focus on a single, low-stakes task, easing the mental load and encouraging a state of mindfulness. Whether it's spending an hour with a jigsaw puzzle or tending to your houseplants, these activities provide a sanctuary from the digital noise.

The Charm of Tangible Experiences Remember the satisfaction of holding a finished model aeroplane or flipping through a photo album filled with actual printed pictures? Digital files and online galleries just don't have the rich sensory experience of their physical counterparts. This rise of analog activities is partly driven by a desire for those tangible rewards.

Analogue hobbies engage all our senses. Think of the earthy smell of a garden after rain, the texture of clay on a potter's wheel, or the sound of a vinyl record crackling to life. These experiences ground us in the present moment. Making something with your hands gives you a unique sense of accomplishment. You're not just consuming content; you're producing something real and lasting, which is a powerful antidote to how fleeting everything feels on social media.

Finding Your Outdoor Passion Getting away from screens often means getting outside. Reconnecting with nature is one of the best ways to fight screen fatigue and find a rewarding new pastime. The options are huge, from gentle woodland walks and birdwatching to more active pursuits like cycling or kayaking. The trick is to find something that sparks your interest and gets you moving in the fresh air.

If you're looking to learn a new skill while enjoying the outdoors, taking up golf can be a fantastic choice. It combines mental focus, physical activity, and beautiful scenery into one rewarding package. Getting started is often easier than you might think, with plenty of professionals ready to guide you through your first swing so it's worth it to find local golf lessons if you can. An afternoon on the green is a perfect screen-free escape that challenges both your body and your mind.

Skills That Last a Lifetime Many analogue hobbies come with a wonderful bonus: you learn a genuine, useful skill. While your ability to win at a mobile game might not have much application elsewhere, learning to cook, sew, play a musical instrument, or fix a bicycle certainly does. These are skills that offer a sense of self-reliance and competence, which can boost your confidence in all areas of life.

These pursuits teach patience, problem-solving, and perseverance. Mastering a new chord on the guitar or perfecting a dovetail joint in woodworking takes dedication. This process of gradual improvement is incredibly rewarding. You're not just passing the time; you're investing in yourself, building a skill set that will stay with you long after the latest app has been forgotten.

The return to analogue is more than a trend; it's a movement toward a more balanced and fulfilling way of living. It's about remembering the simple pleasure of doing something just for the joy of it. The best hobby is the one that makes you forget to check your phone.

Reflexionamos sobre la situación actual de la industria del videojuego, y como un nuevo "crash", como el de 1983, podría volver a suceder si no cambian las cosas.

La industria del videojuego tiene síntomas de estar enferma, parece ir directo a un nuevo "crash" como en

Quizá sea solo una sensación mía, pero desde el pasado mes de julio, todo parece indicar que la industria del videojuego. Y cuando digo todo, me refiero a absolutamente TODO. Da la sensación de que ya casi nada da pie a una bola, que hemos perdido el paso del baile y que la toma de decisiones es cada vez menos acertada.

Lo peor es que pocos se salvan de esta inercia, la que ha entrado en peor. No voy a volver a hablar del fin del formato físico en PlayStation, porque ya han corrido ríos de "tinta" (aunque sea electrónica) en esta página desde entonces. Y lo seguiremos haciendo, porque creemos que es una decisión desafortunada, que daña a la industria tal y como la conocemos.

Ya no es solo que nos quiten el derecho a elegir dónde o cómo quiero comprar un juego. Es la arrogancia de no preguntar a sus socios, ni evaluar el daño para la industria en su conjunto, y sobre todo, no escuchar a los compradores, que siguen antorcha en mano para revertir esta situación.

Lo que está claro es que no parece que los directivos de Sony estén por la labor de querer cambiar el rumbo. Tengo curiosidad por ver qué va a pasar cuando los usuarios disconformes con la medida empiecen a hablar con su cartera, y aunque me dolería que Marvel Lobezno pagara el pato, puede ser una buena vara de medir para ambas posturas, ya sea para que Sony refuerce su discurso o para pasarle la mano por la cara.

Pero lo dicho, no quiero hablar más del tema porque, en el fondo, es solo un síntoma más de la enfermedad. Sí, porque visto desde fuera, la industria del videojuego parece estar "enferma", y cogiendo velocidad de crucero para algo que ya empieza a oler a "crash 2.0".

Y aunque lo llevo pensando tiempo, otros como Tim Sweeney lo dicen en voz alta. La historia es cíclica, y hay corrientes que piensan que tiende a repetirse en un bucle "infinito"... y aquí hay indicios que apuntan a que puede darse el caso. Ya hubo un crash en 1983, con el que la situación actual empieza a guardar similitudes y podría repetirse.

Si bien aquí el problema no es que haya saturación de juegos de baja calidad, si hay una increíble ansia de ganar todo lo posible, por no llamarlo avaricia, y que está provocando cierto hastío en los jugadores. Entonces, en 1983, la salvación fueron los ordenadores, así como hacer pasar a Famicom, la "culpable" de la resurrección de las consolas, como uno de ellos (Family Computer).

Ahora, parecía que los ordenadores y Steam iban a ser el refugio de los jugadores descontentos con la situación actual y que "para un mundo solo con consolas digitales, para eso se van a Steam", un mantra que leemos a diario en redes. Pero... ¿qué pasa si los ordenadores también se están convirtiendo en un objeto de lujo, con sus componentes disparando los precios a un ritmo exorbitado?

Y lo peor es que no tiene visos de parar a corto plazo por culpa de la IA, que está absorbiendo todos los nuevos componentes que se lanzan al mercado. Por que sí, la situación global también está haciendo mella en nuestra forma de ocio favorita, solo hace falta echar un ojo a lo que llevamos de 2026 para comprobar que buena parte de las noticias y anuncios diarios son para dar malas nuevas.

Ya no solo despidos, cierres o cancelaciones. La guerra en oriente, los aranceles de Trump o la IA han hecho que, por ejemplo, consolas con 5 años en el mercado suban de precio, cuando antes lo normal era bajarlo (sí, PS5 y Switch 2 también). Las suscripciones a servicios también han subido de precio, o han bajado, pero trayendo de la mano recortes (como menos horas de juego en la nube) y catálogo (menos juegos disponibles en el día 1 en Game Pass, por ejemplo), lo que a su vez es un perjuicio para el consumidor final que ya estuviera suscrito.

¿Sigo? Cada vez es más difícil conseguir ciertas ediciones "golosonas". Lo de Yakuza Anniversary en 2025 fue un aviso (si llegaron a 1000 unidades, ya fueron), y la cosa no ha dejado de ir a peor... en todos los editores. Cada vez más juegos llegan con contadísimas unidades a las tiendas físicas y se agotan en el mismo "Day One" (todavía estoy esperando a la reposición de Rhythm Paradise Groove, el último gran lanzamiento de Switch, que lleva agotado desde el 2 de julio hasta en Nintendo Store... y me niego a darle el dinero a los reventas, que es otra parte del problema, aunque este lo generan ciertos "usuarios").

Para animar el cotarro, colosos como GTA 6 se han unido a la fiesta anunciando un lanzamiento sin disco (su CEO ha intentado quitarle hierro al asunto). Desconozco si se debe al afán controlador de Rockstar (para evitar filtraciones, aunque finalmente han sucedido igualmente), o si es porque el juego va a ocupar 300 gigas y necesitarían 3 blu-ray. En esto no tengo los datos, pero si tengo claro que quien compra un juego físico, no quiere los "CIAB" o códigos en caja. Yo el primero. Todo parece un akelarre orquestado para llevar a más usuarios a las tiendas digitales y acelerar el fin de un formato físico que, si bien no vive su mejor momento (sobre esto también podríamos hablar, porque lo han desvirtuado con discos que son solo la licencia, títulos que requieren descarga o conexión, sin parches...), sigue teniendo un peso importante en Europa y, sobre todo, un público.

No voy a recordar de nuevo a los vinilos, la radio... El cuello de botella también lo provoca el elevado coste que conlleva desarrollar hoy un juego AAA, que en las últimas generaciones han ido escalando exponencialmente. Y si es un mamut como GTA 6, que lleva en desarrollo más de una década y ha costado más de 2000 millones de dólares, pues más todavía.

Pero quizá ese sea el problema que tiene más fácil solución: limitar los presupuestos y equipos, y hacer juegos más "modestos". Estiman que Resident Evil Requiem costó entre 40 y 60 millones de dólares, y ha generado una burrada de dinero... En este contexto, tampoco ayudan algunas prácticas que tampoco entusiasman a los jugadores; hablo de accesos anticipados para jugar antes que nadie (en ediciones de 120 euros), discos que requieren conexión a Internet, DLCs que se anuncian con meses de antelación (cuando el juego ni siquiera se ha lanzado) o ediciones de ultralujo que cuestan 500 euros, casi como una consola.

¿No parece apuntar todo a lo mismo? Final Fantasy VII Revelation ha sido el último en apuntarse a todas estas tendencias, para "celebrar" el final de la trilogía, rompiendo una trayectoria que para mí era impecable. Y me apena. Sí, fabricar una Gamecard, un disco o un componente de una consola, es hoy más caro que hace dos años, y se debe a la avaricia, a querer ganar más vendiendo lo mismo más caro (hablo de los fabricantes de componentes, que están haciendo su agosto con la IA) y si bien puedo entender las respuestas que está dando la industria del videojuego,, como los recortes o las subidas de precio, ya sea para reducir los costes o aumentar beneficios, es complicado no sentir que detrás están unos accionistas con una avaricia desmesurada.

Esa misma avaricia por querer un trozo del pastel que provocó el primer "crash". Porque no nos olvidemos que, en el mundo digital, los costes son otros (no hay soporte, no hay caja, no hay transporte...) y prácticamente nadie repercute esa ventaja en el comprador.

Es un paso más para controlar por completo el mercado, acabar con la segunda mano, los préstamos y de paso, que cada tienda digital sea la única que decide el precio, sin opción a encontrarlo más barato... salvo cuando ellos quieran ponerlo en oferta. O con los precios dinámicos, si a mí me gustan los plataformas, que me los vendan más caros.

CONTINÚA · HISTORIA 11

Es todo disparatado. El problema de fondo es que, en gran medida, todos somos capaces de ver "la enfermedad", pero nadie quiere "aplicar" la cura. Y cuando alguien da con la clave, extraña y casi parece un milagro. Que Silksong saliera por 20 euros y fuera aplaudido en todo el mundo dio una pista. "Es que solo lo han hecho cuatro gatos en 7 años"... ¿y tiene eso algo de malo? A lo mejor la industria tiene que repensarse. O que Clair Obscur: Expedition 33 se lanzara a precio reducido, fuera desarrollado por un equipo pequeño y arrasara en The Game Awards, a lo mejor también está insinuando algo. O Astro Bot, el juego "más pequeño" de Sony en los últimos años, GOTY en 2024.

No sé, llamadme loco, pero creo que hay indicadores muy evidentes y la cura hasta parece sencilla... Solo necesita un cambio de mentalidad. Y sobre todo, respetar al comprador, que al final es quien te sostiene.
