

EDICIÓN SEMANAL · REVISTA PERSONAL

UNA SEMANA. UN NÚMERO.

2026-09-13 — 2026-09-20

WEEKLY

#38

EDICIÓN PERSONAL · REVISTA SEMANAL

24 HISTORIAS · 14 FUENTES

EDICIÓN CERRADA

DESDE LA REDACCIÓN

UNA SEMANA. UN NÚMERO.

WEEKLY existe porque internet produce demasiadas cosas interesantes como para intentar leerlas todas y demasiadas cosas absurdas como para dejar que el algoritmo decida por nosotros.

Esta revista junta las fuentes que elegiste, encuentra historias que merecen atención y las convierte en un número que se puede leer de principio a fin. No pretende ser neutral sobre lo que resulta interesante: pretende ser curiosa.

Aquí conviven videojuegos, cine, animación, tecnología, retro y todas esas cosas raras que terminan apareciendo cuando uno sigue un enlace porque decía que algo era prácticamente magia.

WEEKLY no quiere reemplazar a las fuentes originales. Quiere ser el lugar desde donde descubres qué vale la pena abrir. Cuando una historia está completa, la leemos aquí. Cuando una fuente solo permite ofrecer un resumen, te mandamos a leerla donde corresponde.

Una semana. Un número. Un montón de cosas interesantes.

Nos vemos la próxima semana.

“Whether Ed Sheeran believes his music is apolitical, that decision is no longer in his hands.”

It was unfairly ripped from his hands. Stop with the bullshit lies.

Can’t say the tour didn’t earn it.

Oh, it’s so simple! Thanks for clarifying the 80 year old conflict!

The launch of Windows 95 sparked a new era for PC gaming. It moved away from the DOS command prompt and embraced a more user-friendly, mouse-driven interface. This change laid the groundwork for the modern gaming experiences we enjoy today. There are numerous PC games from that time that not only continue to exist, but have been brought back into existence by officially released remasters, so there is no need for any CD drive or beige tower to play them.

Why Windows 95 Games Still Matter The mid- and late 1990s saw the release of many impressive games. Real-time strategy games found their formula. Action RPGs reached their peak. Point-and-click adventure games reached their creative peak, but soon lost popularity. Commenting on these games isn't just nostalgia. Many of them laid the foundations for design and are still found in modern releases.

Therefore, they are important for new and returning fans. There's also an important practical aspect: many of these games have become cheaper and more stable to use than they were on their original hardware platforms. Casino games can also benefit from this development. These games even offer no deposit bonuses, which you can read about at <https://www.slotozilla.com/uk/no-deposit-bonus> from Slotozilla experts. This is an interesting alternative to action RPGs if you're looking for something more relaxed.

Windows 95 Games You Can Still Play Today There are five games on this list, which have been selected because of their variety and not because they have the same type or mechanics of game design covered in a different wrapper. A side-by-side comparison will help understand how each of these selections stands up:

The diversity in play styles among these games is striking. They don't share many traits, showing that they cover a wide range of game genres.

Age of Empires (1997) Microsoft's ancient world real-time strategy game lets gamers guide a civilization. They started with a few villagers and expanded to a vast empire. This game set the standard for many future RTS games. It is the Definitive Edition of the remastered version of this game that can be downloaded right from Steam, where it has been made by upgrading the graphics of the original and the expansion version Rise of Rome.

CONTINÚA · HISTORIA 02

Diablo (1996) The Diablo adventure action RPG dropped players inside Tristram Cathedral, into randomly generated levels filled with demons, treasures, and increasingly scarce resources. You can buy it on GOG.com without DRM. There are two options: the original 1996 version or a GOG enhanced version. The enhanced version supports high resolution. This lets you enjoy both the classic and a more user-friendly experience.

RollerCoaster Tycoon (1999) Chris Sawyer's rollercoaster game allowed users to create increasingly complex rides balancing their budget, guest satisfaction, and of course, an occasional disastrous rollercoaster crash. RollerCoaster Tycoon Deluxe and RollerCoaster Tycoon Classic are on Steam. Deluxe has the original game plus two add-ons: Corkscrew Follies and Loopy Landscapes.

The Curse of Monkey Island (1997) The third Monkey Island adventure from LucasArts is considered to be one of the most brilliant point and click games of its time, featuring pirate puns and an eccentric cast of characters. The game can be found online on Steam and GOG ; gamers looking for a smoother experience would run it in ScummVM rather than in its default launcher, as save states seem to work better that way.

Quake (1996) Id Software's sequel to Doom took the first-person shooter genre into full 3D with its industrial gothic style and Trent Reznor music score. Quake Enhanced has been surprisingly active for a project that's nearly 30 years old. Released in 2021, it's free for anyone with the game on Steam or GOG. New episodes continued to be made until August 2026, plus a 30th anniversary update was added.

How to Play Windows 95 Games on Modern PCs The vast majority of games listed above overcome their compatibility issues by themselves, because their official remasters are already available natively for the current Windows versions. In case there is no official remaster of some game, several other ways of solving the issue are still possible:

Compatibility mode. Windows still includes built-in compatibility settings that can smooth out issues with older executables, found by right-clicking a game's shortcut and opening its Properties.

ScummVM. An open-source engine specifically built to run LucasArts-style point-and-click adventures on modern systems, using game files you already legally own.

DOSBox and similar tools. These recreate the environment older DOS and early Windows games expected, and are commonly bundled directly into official GOG releases.

Digital storefront re-releases. As with every game above, publishers frequently handle the technical heavy lifting themselves through Steam, GOG or their own launchers.

Official re-releases are usually better than hunting for old installation disks. Publishers handle licensing and compatibility issues. Plus, they provide a steady flow of new content for Quake. In the cases where no official remastering has been done, looking up the game on a preservation-oriented website like GOG is easier than working out an old version. All of these games require nothing more than a legitimate copy, not even an old beige tower gathering dust in the attic.

The logo for 'Pro MMA' is rendered in a pixelated, blocky font. The word 'Pro' is in black, while 'MMA' is filled with a rainbow gradient (red, orange, yellow, green, blue) and has a black outline.

Why Steam Gets More Benefit of the Doubt Steam isn't fundamentally different because its games are digitally licensed. The difference is the environment surrounding that license.

PC gaming is relatively open. Players can modify files, install mods, create unofficial patches, preserve installers, and sometimes build community solutions when an old game stops working. If a publisher abandons a game, the community may have ways to keep it alive.

None of these services are guaranteed. Steam games can still use DRM, disappear from sale, or depend on online services.

Valve's own agreement also restricts users from modifying, copying, or distributing its content without permission. But the thing is, PC users simply have more room to work around those restrictions.

There is also a matter of trust. Valve co-founder Gabe Newell and Steam have spent years building a reputation for maintaining a large, convenient digital library.

That reputation doesn't change the legal nature of a Steam purchase, but it can influence how comfortable people are with the arrangement.

A Steam user might reasonably think, "I don't technically own the game, but I trust this platform to keep my library accessible."

That confidence isn't universal, but it helps explain why the same licensing model can produce a different reaction.

PlayStation Has a Different Problem As for PlayStation, maybe telling your consumer base they don't own the games they buy with their hard-earned money is not the best idea to build trust.

The bigger issue for PlayStation users is that consoles are closed platforms.

If a PC game develops a compatibility problem, someone can potentially create a fix. If its servers disappear, players might create unofficial alternatives. If the game's files need modification, the hardware generally allows users to attempt it.

A standard PlayStation doesn't offer that same freedom.

Players depend much more heavily on the relationship between their account, their console, the PlayStation Store, and the publisher's infrastructure.

If a game is delisted, becomes dependent on a discontinued service or encounters a problem that the developer no longer supports, ordinary players have fewer ways to intervene.

Physical media becomes more meaningful even for people who prefer buying digitally.

The disc isn't valuable simply because it is made of plastic. It provides an independent copy of at least part of the game outside the storefront. It can be stored, traded, and retained without requiring the publisher to keep selling it. Sony itself has acknowledged that physical discs are becoming less central to its business.

In a recent investor Q&A, the company said it plans to discontinue physical disc production and move toward packages containing download codes instead, while arguing that physical media is not a key differentiator between PlayStation and PC.

The Real Question Isn't Physical vs. Digital Digital distribution is convenient. It eliminates manufacturing and shipping, provides players immediate access, and lets developers update games after release. There are plenty of pragmatic reasons the industry continues moving in that direction.

The concern is what players give up in exchange.

A physical game can be lost or damaged, and modern discs can still depend on downloads and servers. A digital game can be easier to access but is more closely tied to an account and platform.

Knowing that difference becomes especially important for preservation. Ten or twenty years from now, what happens when a storefront changes, a server shuts down or a company decides that an old game is no longer worth supporting?

PC players often have technical options for answering that question themselves. Console players generally have fewer.

That is why the backlash against Sony's shift isn't necessarily resistance to digital gaming. Steam already demonstrated that digital libraries can become the norm.

The deeper concern is control .

CONTINÚA · HISTORIA 03

If a player pays for a game but receives a license rather than ownership, and physical copies eventually disappear, how much control should that player expect to retain over the game after the platform moves on?

That truly is the question underneath the heated argument about whether CDs are going out of style.

Tom Cruise Reveals How He Cut ‘Digger’ Transformation Time From Six Hours to Under One

Alejandro G. Iñárritu’s dark comedy with an unrecognizable Cruise as the lead opens in theaters Oct. 2.

Tom Cruise Reveals How He Cut ‘Digger’ Transformation Time From

Tom Cruise is revealing how he helped cut down the time it took to transform him into his unrecognizable character in the upcoming movie *Digger*.

On a Friday episode of Travis and Jason Kelce's *New Heights* podcast, Cruise said it originally took six hours for the hair and makeup teams to apply the prosthetics that transformed him for the role. But with his busy filming schedule — and a need for some sleep — he knew the process had to become more efficient.

"The first time we did the makeup, it took six hours," Cruise said. Related Stories Movies Ryan Gosling's 'Blade Runner 2049' Coat Among 300 Items Set for Auction From Sequel (Exclusive) Movies Warner Bros. Chiefs Double Down On Film Strategy: "We Really Believe In An Eclectic Slate"

"I gotta sleep at least six [hours]. They keep saying I need more... but OK, that's 12," he continued. "Now, we have 12-hour days filming. So now that's six hours on, two hours off with the makeup."

So Cruise came up with a plan to speed things up, which included bringing in a chalkboard and having someone use a stopwatch to time how long it took the team to apply each prosthetic.

"I had a guy there with a stopwatch, and I'm like, 'OK, you see that time, six hours? By the time we're done, we're going to get it under an hour,'" Cruise said. "They were like, 'No, I'm not doing that; it will never happen.' I'm like, 'OK, first of all, if you say no, you can't do it; you will never get there. So can we agree that we'll maybe make it a little less?' So with each piece that was going on, it was timed and then we'd drill and practice."

"They were like, 'What?!' And they didn't even know it, and they didn't even rush," the *Mission: Impossible* star recalled.

Cruise said the experience reflected how he approaches his work in general.

"I like going into a system, studying it and trying to figure out how I can do it better, more efficient," he said. "The films that I make, I'm constantly going, how can I do it better? How do I prepare better?"

Cruise previously underwent a heavy prosthetic transformation to play studio executive Les Grossman in the 2008 comedy *Tropic Thunder*. *Digger* marks his first character role of this kind since then.

In Alejandro G. Iñárritu's *Digger*, Cruise plays eccentric oil tycoon Digger Rockwell, who has gray hair, wrinkles and a larger frame than the actor. After creating an environmental disaster, Rockwell is ordered by the U.S. president, played by John Goodman, to fix the damage.

Digger opens in theaters Oct. 2.

Big Bang Theory Spinoff Features Surprise Live-Action Cameos from The Flash and Mr. Freeze

Big Bang Theory spinoff *Stuart Fails to Save the Universe* featured a surprise fight between a live-action Flash and Mr. Freeze, but the show's creators originally wanted a different DC hero cameo.

Fans of the sci-fi comedy offshoot may have been surprised to see it dive headfirst into comic book crossover territory when Season 1 Episode 9 premiered earlier this week. The episode saw Stuart Bloom and his universe-traveling companions plopped into a Gotham City come to life, with things quickly taking a turn when none other than classic Batman villain Mr. Freeze (played here by Eric Allan Kramer) shows up.

TV show budgets aside, this is a full-on live-action take on Victor Fries that shoots killer icicles, builds giant ice walls, and even tries to kill Stuart with a giant icy bowling ball. DC fans found even more to recognize when a live-action version of Jay Garrick's Flash (played by Andy Ridings) ran in to save the day – and deliver a few one-liners.

The Flash has officially appeared in live action in 'The Big Bang Theory' Stuart spinoff show.

pic.twitter.com/UnfelkJErE

Stuart Fails to Save the Universe packed in the references, with there even being a mention that Golden Age Flash should probably be fighting someone like Captain Cold instead of Mr. Freeze. It was enough to get tongues wagging on social media, with fans mostly just happy to see any live-action Flash for the first time since Ezra Miller played Barry Allen in 2023's universe-ending standalone film .

"Why is the costume good???" one fan said .

"The clash of the bulky mechanic Mr. Freeze and the vibrant spandex on Flash? Oh yeah, that's what it's all about," another said .

As much of a splash as The Flash vs. Mr. Freeze made, this specific matchup wasn't the original plan. *Stuart Fails to Save the Universe* co-creator Zak Penn told *Deadline* that the episode's title, "Spoiler: We Couldn't Get Green Lantern," was more than just a gag. You can probably guess why Hal Jordan or John Stewart didn't show up.

"They told us we couldn't have him because of [HBO's live-action series] *Lanterns* , which I understood," Penn said. "Chuck [Lorre] was a little grumbly about it, but Bill and I pointed out to him that Flash was actually perfect. If we needed something that's going from dimension to dimension, Flash worked even better than Green Lantern."

CONTINÚA · HISTORIA 06

Lanterns, of course, is very much still on the air, so bringing any of its characters – and even potentially its actors – could have been pretty confusing. The DCU show has so far received praise for its grounded approach to two classic Green Lanterns, and it's clear the Big Bang Theory spinoff was going for something a little more tongue-in-cheek.

#flash #stuartfailstheuniverse homage pic.twitter.com/Yz5e1t6n3o

Stuart Fails to Save the Universe is also in the midst of its first season, which will conclude when episode 10 premieres next week. The DCU is currently without a live-action Flash or Mr. Freeze, but Lanterns will continue to construct its Hal and John when its next episode arrives tomorrow , September 20, 2026.

Naomi Watts Dedicates Donostia Award to Her ‘Mulholland Drive’ Director David Lynch: “I Miss You”

British star Naomi Watts dedicated her Donostia Award to the late, great David Lynch on Saturday night. Watts picked up San Sebastián Film Festival's most prestigious honor before a screening of her latest feature, *The Housewife*. She was introduced by J.A. Bayona, the Spanish filmmaker who directed Watts in 2012's *The Impossible*, which would earn the actress her second Oscar nomination.

"Naomi, I want to thank you for having trusted that young director who was scared to death," said Bayona, who spoke touchingly about their time shooting the project, based on a real story from the 2004 Boxing Day tsunami. "For being the best travel companion I've ever had, and for teaching me something that, today, I'm still looking [for] every time I start working in front of a new actor. I admire you deeply, but above all, I love you. And tonight I can also say that I am fulfilling a dream, a dream come true." Related Stories Movies San Sebastián Chief José Luis Rebordinos on His Final Year at the Helm -- and Being the Only Top Film Festival to Take a Political Stance Movies Werner Herzog Picks Up San Sebastian's Donostia Award at Politically Charged Opening Ceremony

Watts was emotional as she came to collect the award and thanked Bayona for his kind words. "Shooting in Spain with incredible crews, getting to know the Thai community, so many full, brilliant memories, and I loved it all, the whole experience, even the hard stuff," she said about *The Impossible*, which grossed over \$198 million at the global box office upon its release. "Even doing 30 takes in the water tank, submerged," she laughed, shouting out her co-star Tom Holland, who made his live-action debut in the film aged 15. "Tom Holland called it the best water park he ever went to. I called it pure pain!"

CONTINÚA · HISTORIA 07

The Briton continued that it “wasn’t an easy trajectory” making a name for herself in Hollywood. “There was so much rejection. A lot of people telling me I wasn’t going to make it,” she said. After 10 years of back-to-back rejections, everything changed when she met her Mulholland Drive director, David Lynch. “[He] saw me, and all those wounds from all that rejection now appeared as growth. He gave me the role that you couldn’t even dream for. He really just changed my life. He gave me a different understanding of what it meant to act, to trust instinct, to embrace uncertainty, and to not be afraid of the strange or the unexplained. But more than that, he believed in something in me before I fully believed in myself, and that is a gift that you never forget. So tonight, I do really feel like this award is very much about David.”

Watts, now 57, also added that she is grateful, “as a woman of my age, despite what I was told at 31 when I was launching Mulholland Drive — that it’d be all dried up and finished at the age of 40 — I’m grateful beyond words to be part of shifting that narrative,” she beamed. Her rallying cry continued: “We need to see ourselves. Women are consumers of films and storytelling too. We want to see ourselves reflected on screen.”

After thanking festival organizers, Watts vowed to the applauding audience: “I still have lots more in me and I’m still reaching for the stars. So thank you for giving me the privilege of doing what I love to do. And David Lynch,” she added, holding up her Donostia Award, “I miss you!”

The Housewife, directed by Ben Shirinian and co-starring Tye Sheridan, Michael Imperioli, and Luke Evans, is based on a true story and set in 1964 New York. When a young journalist tracks down a potential Nazi officer living secretly in Queens, he befriends the lead suspect’s charming wife. But the investigation soon takes a disturbing turn.

On honoring Watts, the festival said she combines “independent films with big productions on both the big and the small screen.” Her first Oscar nomination came through Alejandro González Iñárritu’s 21 Grams (2003).

She achieved international fame thanks to Mulholland Drive (2001), but has also worked with filmmakers including Peter Jackson (King Kong), David Cronenberg (Eastern Promises), Clint Eastwood (J. Edgar), Michael Haneke (Funny Games), Audrey Diwan (Emmanuelle), Noah Baumbach (While We’re Young) and Rodrigo García, with whom she came to San Sebastián in 2009 to close the official selection out of competition with Mother & Child.

The 2026 San Sebastián International Film Festival runs Sep. 18-26 and kicked off with a Donostia Award for Werner Herzog on Friday, before a screening of Fatih Akin’s Ghost Song. The Hollywood Reporter caught up with outgoing festival director José Luis Rebordinos about his legacy and taking a political stance here.

Melissa Barrera Appears To React To 'Scream 7' Premiere Protest: "I See You"

Spyglass fired Barrera in November 2023 over her social media posts on the Israel-Hamas conflict and the "atrocities being committed against Palestinians," explaining the company has "zero tolerance for antisemitism or the incitement of hate in any form, including false references to genocide, ethnic cleansing, Holocaust distortion or anything that flagrantly crosses the line into hate speech."

CONTINUÍA · HISTORIA 08

Following her ousting, Jenna Ortega also exited the franchise , later noting that the sequel “ was all kind of falling apart ” without Barrera to play its new “final girl” Sam Carpenter. Director Christopher Landon dropped out of the project as well, citing “highly aggressive and really scary” death threats targeting his children .

Neve Campbell was then brought back to reprise her role as OG “final girl” Sidney Campbell for *Scream 7* in March 2024, with original *Scream* (1996) writer Williamson on board to direct. She previously sat out *Scream VI* (2023) over the low pay offer.

As the seventh installment of the slasher franchise premiered at Paramount Studios in February, “Free Palestine” protesters lined up outside the entrance to the lot. Back when the first trailer for *Scream 7* was released last October, fans quickly began slamming the movie on social media, calling for a boycott .

I told anyone who’d listen what an outrage her getting fired was and I boycotted *Scream* after being a fan since the first movie. It kinda felt like throwing pebbles into the sea though.

Disgraceful she was fired.

It’s more complicated than a bumper sticker, unfortunately

You either stand with the oppressor or the oppressed. It’s that simple.

That fits on a bumper sticker.

Flock reportedly tries to shrink workforce with employee buyouts

Without buyouts, Flock would "almost certainly" need to lay off staff.

Disrupt 2026: OpenAI, Anthropic, Replit, and others take over 6th annual event
 Back by popular demand: Save up to \$300 on Disrupt
 Embedded surveillance technology company Flock Safety unveiled a “generous” severance package for voluntary employee departures on Friday, according to a report in Wired.
 Flock reportedly expects a significant portion of its 1,500-person workforce to express interest in the buyouts, and said it will grant them to a majority of those who are interested. The company’s internal announcement described these packages as the “most generous” it has ever offered.
 By letting employees depart voluntarily, Flock can say goodbye to team members demoralized by the ongoing backlash over the company’s license plate recognition technology. Wired also reports that without buyouts, the company would “almost certainly” need to lay off some staff.

In August, The Washington Post identified 46 cases where police officers have been accused of misusing Flock technology, including cases where they allegedly stalked their wives, girlfriends, or exes. Florida and Texas both said they will stop using the startup’s technology, and an anti-surveillance advocacy group identified 90 cities that dropped Flock in August alone — a fourfold increase from the previous month.

TechCrunch has reached out to Flock for comment. The startup’s CEO Garrett Langley recently told the All-In podcast that the “biggest damage” caused by the backlash has been to “internal morale.”

TECHNOLOGY

Disrupt 2026: OpenAI, Anthropic, Replit, and more take over 5 industry stages. 25% off tickets now

Back by popular demand: Save up to \$300 on Disrupt

Trump says it's time to rebrand AI with a new name — and he's also creating an AI Force

President Donald Trump has responded in characteristic fashion to the recent debate around AI safety — by declaring that these concerns are part of a long line of hoaxes “generated by the Radical Left Democrats, for purposes of destroying our Country.”

On Saturday, Trump began his musings on AI by writing on his social network Truth Social that “many people think that the words ‘Artificial Intelligence’ are inaccurate, and very ineloquent, relative to AI, or Artificial Intelligence.” So he posted a poll where followers could vote on a new name for the technology — Superior Intelligence, Extreme Intelligence, or Supreme Intelligence. (The poll is still ongoing as of publication time)

A couple hours later, Trump followed up with a post claiming that attempts at “the decimation, or destruction, of AI” are one of “many” Democratic hoaxes, similar to “RUSSIA, RUSSIA, RUSSIA, UKRAINE, UKRAINE, UKRAINE, Global Warming, Impeachment Hoax #1, Impeachment Hoax #2, Men in Women’s Sports, [and] Transgender for Everyone.”

Trump then insisted that he “will not stand by and let this happen,” adding that this so-called hoax “began with an attack on our Data Centers, until people realized how wealthy and prestigious they were for the Communities in which they were built.” But after, in his telling, “the crazed Data Center attack has largely failed,” critics are “going straight at AI.”

Trump did not offer any evidence to back up his claim that widespread suspicion of AI and data centers is not organic and sincere . (Both Republicans and Democrats have taken aim at data centers, and New York recently became the first state to halt permits for large projects .)

The president’s post also echoes his comments at a golf tournament last weekend , when he said he’s open to “guardrails,” but also argued, “I think you have a lot of negative forces that are bringing it up that shouldn’t be bringing it up.”

On Saturday, Trump went on to say that he will “cherish [the AI industry,] help it, and watch over it, as it grows,” but he’s also forming an AI Force, similar to the Space Force that he established in his first term.

“To that end, I will be announcing, in the near future, the AI ‘Czar’ — Only High I.Q. individuals need apply!” he added.

CONTINÚA · HISTORIA 10

The president did not say what the AI Force and AI czar's duties will entail. Venture capitalist David Sacks stepped down as Trump's AI and crypto czar earlier this year, moving on to co-chair the President's Council of Advisors on Science and Technology.

The AI safety debate recently intensified after an AI researcher said he was quitting Anthropic over concerns that the leading AI companies "earnestly believe it could kill us all by the end of the decade" and are "gambling with our lives." Anthropic CEO Dario Amodei subsequently released a plan to "pace the frontier," which was seemingly endorsed by OpenAI CEO Sam Altman and SpaceX CEO Elon Musk. Critics of the AI industry have suggested that many of these concerns around the technology's supposed existential threat are a distraction from AI's more immediate harms .

Nvidia CEO Jensen Huang, meanwhile, called Trump on-stage during the All-In Summit (which Sacks co-hosts), agreed with the president that the AI backlash is a "hoax," and insisted that "we're not going to let" a slowdown happen.

¡Parece que hay más contenidos para los fans de Zelda! Nos llegan más anuncios por el 40º aniversario de The Legend of Zelda, ya que Norma Editorial lanzará en diciembre de 2026 The Legend of Zelda Perfect Edition Box, un cofre de edición limitada que reunirá los cinco volúmenes de la Perfect Edition del manga de Akira Himekawa, con más de 1.900 páginas y un póster exclusivo.

La colección, que costará 99,50 euros, incluirá las adaptaciones de Ocarina of Time, Majora's Mask, A Link to the Past, The Minish Cap y Four Swords Adventures, todas en tapa blanda. Se trata de la versión española de la conocida Legendary Edition, aunque no está confirmado que incluya extras como la música de la edición inglesa.

¡ESTE DICIEMBRE @NORMAEDITORIAL LANZA THE LEGEND OF ZELDA PERFECT EDITION BOX (EDICIÓN LIMITADA)! El cofre contiene un póster exclusivo y los cinco volúmenes del manga, que adaptan fielmente los videojuegos emblemáticos de la saga, desde Ocarina of Time a Majora's Mask, A Link...

pic.twitter.com/iVtwWYJsa6 — Estatuas y Comics (@estatuasycomics) September 16, 2026

El lanzamiento está previsto para diciembre, con algunas tiendas señalando el 4 de diciembre como fecha concreta, y llega coincidiendo con este 40º aniversario de The Legend of Zelda, por lo que será una nueva oportunidad para reunir en un único pack buena parte de las historias de Link adaptadas al manga.

Tal vez no lo sepas, pero Lucia Caminos de GTA VI hizo una fugaz aparición en el UCM gracias a Netflix

Aunque Rockstar no ha hecho oficialmente quién da vida a los protagonistas de GTA VI , el público se encargó hace años de intentar desentrañar quiénes iban a ser los protagonistas de la próxima entrega de la franquicia. Para Lucia Caminos, la elegida fue Manni L. Perez , una actriz que, si bien no ha tenido papeles enormemente famosos, sí que tuvo ciertos pinitos en algunas series o películas. Uno de estos papeles fue en Marvel Studios , concretamente, durante el episodio 11 de la segunda temporada de Jessica Jones , donde interpretaba a una veterinaria que acababa siendo encerrada en una jaula tras un pequeño forcejeo con el personaje interpretado por Krysten Ritter .

Goth Lucia (Manni L Perez) made an appearance in Jessica Jones season 2 (episode 11) by u/Seroko in GTA6unmoderated Si bien su aparición es bastante breve, se puede apreciar que es la misma actriz, sobre todo por su voz, aunque esta tiene un tono mucho más norteamericano que en el videojuego de Rockstar , donde utiliza un lenguaje en el que conviven dos idiomas y que está mucho más apegado a sus orígenes. En Vida Extra De Marvel: Lobezno esperaba ambición desmedida e Insomniac ha sacado las garras a medias Por otro lado, la actriz también trabajó anteriormente con Rockstar Games , pero no en un papel destacado, sino dando voz a una crupier del casino. No sabemos por qué proceso pasó la actriz para pasar de voz secundaria a la cara más visible del juego más esperado de la historia, pero está claro que lo tiene bastante merecido. Ahora queda por ver si Manni aprovechará este bombazo para aterrizar en otros proyectos más allá de los videojuegos, algo que no muchos involucrados en la saga han aprovechado del todo, a excepción de nombres reconocidos como Steven Ogg , que llegó a salir en Better Call Saul y The Walking Dead poco después de su paso por Los Santos. We Ranked The 10 Best Eevee Pokémon Cards of All Time

We've ranked the 10 best Eevee Pokémon cards of all time, from priceless Japanese trophy promos to iconic vintage classics and modern chase cards.

CULTURE

We Ranked The 10 Best Eevee Pokémon Cards of All Time

If you know one thing about me, it's that I love Eevee.

Between a shelf overflowing with a collection of over 100 Eevee plushies and my ongoing quest to complete an ultimate Eevee Master Set binder (collecting every single variant, promo, and English card ever printed for our favorite fluffball), this Pokémon is my number one.

Call me basic, but it's true.

30th Celebration 2-Pack Blister - ME: 30th Celebration

Eevee — Jungle #51/64

Eevee ex - 167/131

Eevee Skyridge 054/144

Eevee - Pokemon Card Fan Club

Eevee - 173 - SV: Scarlet & Violet Promo Cards (SVP)

Eevee (Illustration Rare) — SV06: Twilight Masquerade #188/167

Eevee GX - SM233 - SM Promos

Eevee & Snorlax-GX — Sun & Moon: Team Up #120/181

Eevee V - SWSH: Crown Zenith

So with the 30th Celebration expansion release and Eeveelution chase cards dominating the market, what better time to settle this once and for all: which is the best Eevee card of all time? And I mean Eevee - pure, unevolved, Normal-type Eevee.

No disrespect to the Eeveelutions, but if we let them on this list, we all know Moonbreon would shoot to number one quicker than we can shuffle a deck.

Before we jump in, for those after 30th Celebration boosters, our best suggestion right now is to request an invite from Amazon for the ETB at least, priced much more reasonably compared to other retailers. Invites will be sent out soon!

30th Celebration Elite Trainer Box

10. Eevee — Pokémon TCG: 30th Celebration 2-Pack Blister Promo

Kicking off our list at number ten is the brand-new promo dropping as part of the 30th Anniversary celebration, illustrated by Haru Akasaka.

This compact blister pack bundles two 30th Celebration booster packs, a plastic commemorative coin, and a guaranteed, absolutely adorable foil Eevee promo for \$9.99.

It's a very cute card, and an accessible pickup for anyone looking to join the anniversary hype while adding a fresh Eevee promo to their collection.

9. Eevee — Jungle #51/64

I have a soft spot for this card - this is the classic card that started my personal Eevee master collection after a friend picked it up for me at Christmas. Illustrated by legendary artist Kagemaru Himeno, this original 1999 Jungle common was one of the first cards I collected as a kid, and I know I'm not the only one. While a raw Jungle copy will only set you back a few bucks today, it served as the original artwork base for the famous 2002 Legendary Collection Reverse Holo Fireworks variant (#74/110)—a pristine PSA 10 copy of which recently made history by selling for a staggering \$66,000 at auction!

8. Eevee — Skyridge #054/144

Hailing from the beloved 2003 Skyridge expansion—the final e-Reader set printed by Wizards of the Coast—this card features artist Sumiyoshi Kizuki's signature patch-style of art. I love the 3D fabric effect of this card, it really stands out. Its low print run and iconic e-Series frame make raw copies command around \$51.45 on the secondary market.

7. Eevee (Holo Promo) — 2000 Japanese Pokémon Fan Club Promo

This is one of the most prestigious trophy cards in the entire Eevee TCG history. Its rarity bumps it up a few spots in this list, but it's mainly made it thanks to its cheeky wink. Originally awarded to members of the Japanese Pokémon Fan Club who accumulated 500 total GET Points through magazine activities and events in 2000, this holy grail card features a gorgeous rainbow foil finish and unique expansion stamp. Because of its extreme rarity, copies of this card can fetch between \$2,200.00 – \$2,800.00 on major auction sites.

6. Eevee (Illustration Rare) — SV: Scarlet & Violet Promo #173

Illustrated by Atsushi Furusawa, this promo card captures Eevee lounging lazily on a comfy looking cushion. I love this card because it's the spitting image of when my cats are comfy as heck, with their whole tummy out. With the sun streaming through the window, it makes me wish I could live the life of a spoiled Eevee. Sitting right around \$13 on TCGplayer, it is an absolute steal for any Eevee fan.

5. Eevee & Snorlax-GX — Sun & Moon: Team Up #120/181

This is the legendary tag team from Sun & Moon: Team Up. Illustrated by the iconic Mitsuhiro Arita, this card shows a tiny Eevee happily perched on top of a massive, sleeping Snorlax's belly. A hallmark of TCG history, it comfortably goes for around \$91 on TCGplayer.

4. Eevee-GX — SM Black Star Promos #SM233

Affectionately called Eevee Chungus in fan communities, this card cracks me up every time I see it. The only card illustrated by popular Japanese manga artist and animator Q-rais, this SM Black Star Promo features a delightfully chunky, wide-eyed Eevee drawn in Q-rais's signature quirky, webcomic art style. Released as part of the Eevee-GX Box, its unique aesthetic has made it a massive cult favorite among collectors, pushing its price to over \$134 on TCGplayer.

3. Eevee ex (Special Illustration Rare) — SV: Prismatic Evolutions #167/131

The cover star of the incredibly popular Prismatic Evolutions, this Eevee, illustrated by Sowsow, is one of the top chase cards in the Prismatic Evolutions expansion. This Special Illustration Rare shows Eevee ex surrounded by colorful, glowing elemental crystals that subtly hint at all eight of its possible evolution paths. It's a breathtaking card, along with its breathtaking price - sitting near \$181.

2. Eevee V - SWSH: Crown Zenith

CONTINÚA · HISTORIA 13

Big stepper - this Eevee card, illustrated by You Iribi, is a steal at \$8.35 on TCGplayer. If you place this Eevee V card side-by-side with the Pikachu V (#SWSH285) promo card (released in the Crown Zenith Special Collections), the background graphics and vibrant rainbow artwork align to form a single, continuous connecting panorama.

1. Eevee (Illustration Rare) — SV06: Twilight Masquerade #188/167

What's better than one Eevee? Eight Eevees! Narumi Sato's beloved Twilight Masquerade hit is a masterpiece in domestic chaos. If I lived in the mysterious world of Pokémon, I feel like this is an insight into my life. This mischievous pack of Eevee completely taking over a living room—knocking over pillows, climbing furniture, and causing adorable mayhem. It quickly became one of the most sought-after chase cards in the Scarlet & Violet block, steadily holding a \$93 market value.

Sara Heritage is a freelance journalist for IGN, specialising in Pokémon TCG. When she's not gaming, you'll probably find her building yet another LEGO set she absolutely did not need, or chaining ranked matches in Pokémon Champions.

7 grandes AAA de PS5 en oferta en físico y digital que están a precio de derribo por tiempo limitado

Si estás buscando nuevos AAA de oferta y con un buen descuento para PlayStation 5, echa un vistazo a estas rebajas de juegos tanto en formato físico como en digital en PS Store.

GAMING

7 grandes AAA de PS5 en oferta en físico y digital que están a precio de derribo por tiempo

Jugar en PlayStation 5 se lleva pudiendo hacer desde hace más de 10 años, pero tarde o temprano debía dejar paso a PS5. Sobre todo, porque la actual consola de Sony va camino de cumplir 6 años a la vista. Si ya la tienes, pero ahora mismo no sabes a qué jugar (bien porque te la acabes de comprar o cualquier otra cosa), échale un vistazo a estos 7 grandes AAA de PlayStation 5 en oferta en físico y digital.

Sobre todo porque están a precio de derribo y por tiempo limitado, ninguno cuesta más de 9,99 euros en PlayStation Store y tampoco superan los 19,99 euros en formato físico. Pero lo mejor de todo es que cada uno se diferencia del resto, habiendo RPG, terror, plataformas, rol, FPS, estrategia y mucho más dentro de cada uno de ellos.

En el caso de las ofertas a través de PS Store, date prisa porque caducan el 24 de este mes. En cuanto a los descuentos en físico, a pesar de no tener una fecha, se pueden agotar en un suspiro. ¿Te imaginas con cuál vamos a empezar? Seguro que lo conoces, ya que su protagonista es uno de los rubitos más famosos de los videojuegos. 7 grandes AAA de PS5 en oferta en físico y digital a precio de derribo Resident Evil 4 Remake Está claro que Resident Evil 4 es legendario, pero es que Resident Evil 4 Remake supo ganarse al público respetando y mejorando la aventura original de Leon S.

Kennedy tras el excelente Resident Evil 2; por eso inicia los 7 grandes AAA de PS5 en oferta en físico y digital a precio de derribo. Por poquitas pelotas, tienes una de las experiencias de terror y acción más impactantes, con el Gobierno de EEUU pidiéndonos rescatar a Ashley Graham, la hija del presidente.

Hazlo posible ahora que su oferta del 75% nos lo deja a solo 9,99 euros en PStore. Dragon Ball Z: Kakarot ¿Aún no has jugado al RPG de Goku? Lanzado en 2020 y ampliado con sus DLC o su edición Daima, la historia de Akira Toriyama es parte de estos 7 AAA de oferta para PlayStation a precio de derribo.

Revive toda la historia de Dragon Ball Z, desde la llegada de Raditz hasta la batalla final con Buu, pero desde una perspectiva más rolera. Todo ello por 17,99 euros en Amazon, casi regalado. Final Fantasy VII Rebirth Después de Remake, el estreno de Final Fantasy VII Rebirth nos dejaba con un profundo JRPG de mundo abierto que prosigue la aventura y el segundo capítulo de la versión remasterizada de Final Fantasy VII.

Tras escapar de Midgar, Cloud y sus amigos emprenden un viaje a través del planeta. En este mundo vasto y vibrante, tanto por llanuras verdes en Chocobo como por entornos de gran tamaño, tú marcas el ritmo, el cual está a 17,99 euros en PlayStation Store por su oferta del 70%.

CONTINÚA · HISTORIA 14

Hogwarts Legacy: Digital Deluxe Edition Con Hogwarts Legacy tienes un RPG de acción en un mundo abierto ambientado en el universo de los libros de Harry Potter, solo que en una Hogwarts del siglo XIX; por eso es otro de los 7 grandes AAA de PlayStation en oferta.

Explora el mundo, descubre animales fantásticos, personaliza a tu personaje, elabora pociones y domina hechizos con unos extras como la misión 'La tienda encantada de Hogsmeade' y mucho más, todo ello en descuento del 85% y por 12,74 euros en PS Store. Final Fantasy VII Remake Intergrade Si Final Fantasy VII Remake en PS4 te supo a poco, Square Enix lanzó Intergrade como una versión exclusiva del juego en PlayStation 5 con un episodio protagonizado por Yuffie y muchas otras mejoras; por eso se incluye entre los 7 grandes AAA de PS5 en oferta en físico y digital a precio de derribo.

Además de esto, tiene gatillos hápticos, un aspecto visual mejorado y un modo para jugar a 4K y a 60 FPS. Todo ello a 19,99 euros en Amazon, ¿te lo vas a perder? Tomb Raider I-II-III Remastered Lara Croft regresaba con una remasterización de sus tres primeras aventuras, la cual incluye Tomb Raider I, Tomb Raider II y Tomb Raider III; por eso es parte de los 7 grandes AAA de PS5 en oferta en físico y digital.

Juega las tres aventuras originales de Tomb Raider y disfruta de una experiencia completa con todas las expansiones y niveles secretos, pero en nuevas plataformas; la colección definitiva por 19,99 euros en GAME. Star Wars: Dark Forces Remaster Jugar a Star Wars: Dark Forces es disfrutar como nunca antes de una versión totalmente remasterizada con el motor gráfico propietario KEX, en un FPS que data de 1995 y ahora regresa para ser el último de los 7 AAA de oferta para PS5 a precio de derribo.

Tanto los fans del original como los nuevos jugadores vivirán una experiencia modernizada con texturas en alta resolución, iluminación mejorada y mucho más en la piel de Kyle Katarn, un ex-soldado imperial convertido en mercenario; todo ello a 19,99 euros en GAME.

Con esta aventura galáctica remasterizada por Nightdive Studios, damos por finalizada la nueva ronda de juegos con descuento para todo el que quiera jugar mucho por poco dinero. Te hemos dejado con hasta 7 grandes AAA para PS5 de oferta en físico y digital que están a precio de derribo por tiempo limitado, pero la decisión final es solo tuya.

Zachary Levi pasa el testigo de Flynn Rider con miedo por el live action de Enredados: “No siempre funciona”

La versión en imagen real de Enredados de Disney ha renovado a su elenco, haciendo que la Rapunzel interpretada en su día por Mandy Patinkin pase a ser interpretada por Emma Groff y que al Flynn Rider de Zachary Levi le dé vida Milo Manheim. Orgulloso por cómo ha sido el desarrollo de los acontecimientos, Zachary Levi le pasa el testigo a Milo Manheim deseándole mucha suerte con la película, y esperando que el proyecto sea un éxito porque adora la cinta original en la que trabajó. “Estoy muy contento por todos esos chicos”, admitió el antiguo Flynn Rider una reciente entrevista con el medio ScreenRant. “Quiero que todo el mundo triunfe.

Quiero que todo el mundo triunfe porque me importa muchísimo la propiedad intelectual y el universo, y el nuevo Flynn Rider, y a todo el mundo nos importa”. ¿Logrará el live action de Enredados estar a la altura? “Quiero que la película de acción real sea genial”, añadió Zachary Levi, no sin cierto escepticismo. “Desafortunadamente, no siempre que hacemos remakes, ya sea de una película animada a otra, o hacemos secuelas o lo que sea, funciona”.

Disney ha sido muy desigual en los últimos años con sus remakes en live action. Sin irnos muy atrás en el tiempo, basta con ver cómo el año pasado estrenó auténticas calamidades como Blancanieves (2025) o éxitos absolutos como Lilo y Stitch (2025). Después de traernos Vaiana (2026) este verano, veremos qué tal le sale la jugada con la versión en imagen real de Enredados que fue rodada en España.

Al menos, Zachary Levi tiene fe en que todo vaya genial con la nueva versión de Enredados: “Quiero que funcione. Quiero que sea maravillosa. Quiero que el público diga: “Encontré todo lo que me encantó de la película animada en esta película de acción real””.

Meta's Muse is creepy, but maybe not for the reasons you think

Muse probably can't 'see' your notifications. But it also has no idea how it works.

[Link](#)[Share](#)[Gift](#)

Meta's Muse is apparently an effective AI assistant , but one that's a little creepy. Part of that is because of its new Mac app , which can access Messages, Calendar, and Notes. But for all its smarts, Muse doesn't actually know how to describe itself. Jason Aten, a contributing editor at Inc Magazine , posted on Threads screenshots of an interaction he had with Muse in which the assistant asks him some questions about a conversation he was having in Messages.

The problem is that Aten says he didn't give Muse access to his messages. When asked how it knew about the contents of his messages, Muse replied, "I saw the notification previews, not your message history. I haven't been reading your texts." Aten continued to push, asking how Muse was receiving message previews, it didn't have a good answer. "Honest answer: I can't give you the exact plumbing," it said. "What I know is that the paired Mac app exposes notifications as one of its capabilities, and they arrive to me through the device sync.

Meta Superintelligence Labs' David Singleton chimed in below the post to try to explain. First, he walks through all the permissions Muse needs to read messages, including granting the Mac app full disk access. He states that the features are opt-in. The more interesting part comes in towards the end of the thread in which Singleton says that Muse, "does not watch notifications on your Mac, but rather syncs data from Messages only after the user has specifically enabled access." He suggests that the issue isn't Muse illicitly reading Aten's texts, but simply that Muse has no idea what it's talking about:

In the conversation with his Muse in Jason's screenshots, when Muse said it synced "device notifications", it was confused about how to explain the feature and gave an incorrect explanation. That's on us. We apologize for the incorrect response from Muse and we're working to improve Muse's understanding of its own internals so that it gives correct answers to questions about how it functions more consistently.

That might not be particularly reassuring, but it also makes some sense. We already know chatbots won't tell you their secrets and will instead tell you what you want to hear.

ANIMATION

A CONTINUACIÓN

Brad Bird, Pixar, DreamWorks, Aardman, And More Headline View Conference 2026

The five-day event will feature sessions on 'Toy Story 5,' 'Forgotten Island,' 'GOAT,' and more, plus talks on AI and the future of filmmaking.

ANIMATION

Brad Bird, Pixar, DreamWorks, Aardman, And More Headline View Conference 2026

Stay informed with free updates
Sign up to get our news digest — delivered directly to your inbox every week.

View Conference will return to Turin, Italy, from October 12-16 with a packed five-day program spanning animation, visual effects, games, cinematography, artificial intelligence, and virtual production.

Over the past several years, the English-language event has become an increasingly vital stop for animation and VFX hopefuls heading into awards season, and its 27th edition will feature more than 100 talks, panels, workshops, masterclasses, screenings, and portfolio reviews. Below are some of the biggest attractions headed to Turin for this year's event.

Brad Bird Looks Ahead To 'Ray Gunn'

Brad Bird will discuss his long-gestating animated feature *Ray Gunn in Welcome to the Future*, an hour-long conversation scheduled for October 13.

Bird's appearance leads a strong group of sessions devoted to major upcoming animated features. Joel Crawford and Januel Mercado, the writer-directors of Dreamworks' *Forgotten Island*, will join Pixar's Kenna Harris (*Toy Story 5*) and Sony Pictures Animation's Tyree Dillihay (*GOAT*) for a panel about the future of filmmaking.

Each project will also receive its own spotlight. Harris will lead a behind-the-scenes presentation on *Toy Story 5*, while Dillihay will discuss *GOAT*. Crawford and Mercado will be joined by production designer Ryan Carlson and head of character animation Sean Sexton for a deeper look at *Forgotten Island*.

Pixar, Disney, Laika, And Aardman Take The Stage

Pixar director Daniel Chong and producer Nicole Paradis Grindle will present a session on the making of *Hoppers*. Pixar RenderMan artist Dylan Sisson will separately explore RenderMan XPU and the technology's use on *Toy Story 5*.

Disney Animation producer Yvett Merino will talk about the studio's upcoming holiday release *Hexed*, while Laika production vfx supervisor Steve Emerson will discuss the studio's highly anticipated stop-motion fantasy *Wildwood*. Aardman director Merlin Crossingham will break down the demands of directing a stop-motion feature, from shaping the larger production to managing its smallest details. Stop-motion artists can also attend a separate four-day puppet lab led by Oscar-winning filmmaker Chris Lavis.

Roger And James Deakins On Cinematography

CONTINUÍA · HISTORIA 17

Two-time Oscar-winning cinematographer Sir Roger Deakins and his longtime creative collaborator James Ellis Deakins will close the conference with Reflections on Cinematography.

The pair will discuss their creative process and careers in a conversation moderated by Cartoon Brew editor-in-chief Jamie Lang.

Several of the year's largest films will receive dedicated visual-effects presentations.

Wētā FX senior vfx supervisor Eric Saindon will revisit the production of Avatar: Fire and Ash . Oscar winner Andrew Jackson will present a prerecorded session about The Odyssey , while Paul Lambert and Mag Sarnowska will unpack the effects of Project Hail Mary .

ILM animation director Hal Hickel will discuss The Mandalorian and Grogu , including the challenge of animating creatures and characters for live-action environments. Other sessions will cover Spider-Man: Brand New Day , Disclosure Day , Resident Evil , Masters of the Universe , House of the Dragon season three, Coyote vs. Acme , and A24's Backrooms .

An executive panel featuring ILM head Janet Lewin, Sony Pictures Imageworks president Michelle Grady, and Skydance Animation president Holly Edwards will examine the future of cinema and the businesses creating its imagery.

AI, Games, And The Future Of Production

Artificial intelligence will be a frequent topic of discussion throughout the week, including the panel Every Pixel Will Be Generated, a keynote conversation between NVIDIA media and entertainment vice president Richard Kerris and Runway cofounder and co-CEO Cristobal Valenzuela.

Other panels will examine AI-assisted animation, artist-centered machine-learning tools, automated production, and the technology's impact on hiring and creative control.

View's games lineup, an increasingly important part of the event, includes God of War Ragnarök game director Bruno Velazquez, who will explain the game's one-shot camera approach, along with presentations on Wolverine , Saros , and the Horizon series.

Hands-on programming begins October 12 with workshops covering concept art, Unreal Engine 5, Gaussian splatting, stylized rendering, virtual production, character development, and portfolio preparation. The main conference then moves to Turin's OGR complex, with select evening screenings held at Cinema Massimo.

The complete schedule and ticket information are available through the VIEW Conference website .

Learning another language may be one of the best ways to keep your brain healthy

Research suggests that bilingualism can offer cognitive benefits.

TECHNOLOGY

Learning another language may be one of the best ways to keep your

Learning another language is a highly complex mental activity . It requires people to remember words, distinguish unfamiliar sounds, recognize patterns, work out grammatical rules, and retrieve the right expression at the right moment. All of this happens while listening, interpreting, and preparing a response.

Could all this mental activity also help keep an aging brain healthier ? Research suggests it can .

Concerns about memory and dementia can send aging adults looking for ways to exercise their brain and maintain cognitive function, whether it is solving crossword puzzles or playing a musical instrument. Language learning might not seem like the same kind of brain exercise, but it is a complex activity that engages several mental processes at once.

I am a linguist who studies language acquisition, use, and loss. My new book, *Beyond Words: How We Learn, Use, and Lose Language* , examines language and the mind across people's lifespans.

Research increasingly suggests that language learning and bilingualism can offer cognitive benefits—including for older adults. Learning another language can also create opportunities for communication and social connection.

A person's brain remains capable of change throughout their life. This ability to adapt in response to experience is known as neuroplasticity.

Learning unfamiliar sounds, vocabulary, and grammatical patterns requires the brain to form and strengthen connections. Language learning engages several mental processes at once, requiring people to absorb and retrieve information , notice when something does not work out, and adjust . This sustained mental effort makes language learning a particularly rich form of cognitive exercise.

Research on bilingualism has found differences in both the brain's gray matter, which contains neurons and their connections, and white matter, which consists largely of nerve fibers linking different parts of the brain.

Studies have shown greater gray matter density or stronger white matter integrity in bilingual people , compared with people who speak one language. These findings suggest that language experience can be reflected in the brain's structure, as well as its activity.

But brain differences are only part of the picture.

One reason researchers are interested in language and aging is the idea of cognitive reserve . This term refers to the ability to maintain cognitive function despite age-related changes or damage to the brain.

CONTINÚA · HISTORIA 18

Bilingualism has been proposed as one factor that can help the brain cope with the effects of aging, because managing two languages places ongoing demands on people's attention and cognitive control —ultimately helping to strengthen cognitive reserve.

Some studies have found that bilingual people who develop dementia show symptoms at a later age than people who speak one language . This suggests that bilingualism may provide some protection against the effects of brain aging, although it does not necessarily prevent dementia or the brain changes associated with it.

The potential benefit may therefore be greater resilience in the face of those changes, rather than prevention of the underlying disease.

This raises another question: If lifelong bilingualism may help protect the brain as we age, can people gain similar benefits by learning a language later in life?

Age changes the way languages are learned, but adults remain capable of learning new languages throughout life. Adults and kids bring different strengths to the task. Children tend to have advantages with pronunciation and some aspects of grammar, while adults bring larger vocabularies and better-developed strategies for learning.

Research involving older adults suggests that learning a language can produce cognitive benefits, although the findings are mixed . The potential benefit may come less from achieving fluency than from the process of learning itself. Language learning is a sustained challenge that keeps people learning, practicing, and adapting.

There are social benefits, too. Learning another language can deepen cultural understanding , improve interpersonal communication and encourage people to empathize with other people's perspectives and experiences. It can also connect people with others from different linguistic and cultural backgrounds, creating opportunities for conversation and friendship.

There is no established formula for how much language learning is needed to provide these benefits. Studies have used everything from intensive classroom instruction to short daily sessions with language-learning apps, over periods ranging from weeks to months, to see whether language learning can improve cognitive function. Rather than a magic number of hours, what matters may be sustained engagement in a challenging activity like learning a new language.

Building cognitive resilience

Learning another language is not a miracle cure for aging, and it cannot guarantee protection against Alzheimer's disease or other forms of dementia.

But it is an unusually rich form of mental activity .

Perhaps the most useful way to think about language learning is not as a way to keep the brain young, but as a way to support cognitive resilience —the ability to keep learning, adapting and functioning despite the changes that come with age.

Aging inevitably changes the brain, but people retain the capacity to learn throughout life. Keeping our brains engaged in demanding new activities may contribute to that resilience.

TECHNOLOGY

Rings around a tiny body have changed over the

For decades, astronomers thought rings were something only giant planets had. That changed in 2013, when a small, dark body orbiting between Saturn and Uranus passed in front of a star and blinked twice on either side of the main event, revealing two narrow rings around an object barely 250 kilometers across. “It was a surprise,” says Pablo Santos-Sanz, an astronomer at the Instituto de Astrofísica de Andalucía in Granada, Spain. Ever since, the question has been what such rings are made of and how long they can last.

In a recent study, Santos-Sanz and his colleagues used the James Webb Space Telescope to watch the same body, now known as Chariklo, pass in front of a background star again. They found one of its rings had grown denser and the other had almost vanished. We don’t know exactly why.

The technique behind the observation is simple. “We predict when a Solar System object passes in front of a star,” Santos-Sanz said. The starlight dims for a moment, and the shape of that dip reveals the size, shape, and surroundings of the object that caused it. “This is particularly challenging for minor bodies, and more challenging for distant minor bodies,” he said.

The difficulty is that the target’s silhouette on the sky is minuscule, and knowing when it will cross a particular star requires very precise positioning data for both. Still, in 2013, we used ground telescopes to discern Chariklo’s two rings, C1R and C2R. These sat 390 and 405 kilometers from its center and were only a few kilometers wide and about 7 kilometers apart.

Doing this with a space-based telescope, though, makes lining things up considerably harder. JWST sits at the L2 Lagrange point, and controllers need to nudge the telescope every few weeks to keep its orbit stable. “It’s a kind of tricky task,” Santos-Sanz said. His team identified a possible Chariklo occultation in August 2022 and redid the prediction every week. Between the first prediction and one of the last, the projected line of sight shifted by about 110 kilometers, which was enough to move it off the body entirely. Unfortunately, JWST requires observations like this to be planned at least 14 days in advance.

“We did this maybe a bit blindly, because we didn’t know exactly where the line of sight was,” Santos-Sanz said. “I’m going to move one of the biggest, best telescopes in space, and we don’t know if finally we will catch this or not.” But it all worked out.

CONTINÚA · HISTORIA 19

The occultation came on October 18, 2022. The reconstructed geometry shows JWST's sightline to the background star skimmed 7.4 kilometers above Chariklo's surface, missing the body but catching its rings.

JWST recorded the event simultaneously in two near-infrared bands, at 1.5 and 3.2 micrometers, which made it the first time anyone has caught a minor body's rings in a band beyond three micrometers—a range Earth's atmosphere puts out of reach for ground telescopes.

The inner ring showed up unmistakably, with abrupt, distinct edges, but it was much darker than before. Averaged over roughly 10 previous ground-based occultations, C1R's normal opacity (the fraction of starlight it blocks) sat at 0.303. JWST measured it at 0.431. "We didn't believe it at the beginning, so we fought a lot with the data," Santos-Sanz said.

The most straightforward explanation was geometry. Rings are not always uniform, and JWST might simply have cut through a denser clump. To rule this scenario out, the team built a lumpy ring model and ran 10 million simulated occultations. Reproducing an opacity as high as JWST recorded came out at a roughly 1 in a 1,000 chance at 1.5 micrometers, and 4 in 100,000 at 3.2 micrometers for a single measurement. The telescope caught the ring twice, going in and coming out, which made the odds even smaller than that.

Santos-Sanz concluded that the inner ring most likely got thicker. At the same time, the outer ring did the opposite. C2R barely registered at 1.5 micrometers and did not appear at all at 3.2, even though the telescope was recording the same stretch of ring in both bands at the same instant. "At the beginning we didn't even see the outer ring in the light curve," Santos-Sanz said. "We had to use models. It was really barely visible, so we said, 'What is happening here?'"

The team came up with two possible explanations. The first is that JWST, looking at wavelengths where almost no occultation has ever been recorded, is simply seeing grains that scatter light differently in the infrared. The other is that the rings really have physically changed. Santos-Sanz argues radiative transfer models point toward the latter. The older visible-light observations were consistent with a mixture of ice and silicates, but once the JWST data points are added, no combination of materials and grain sizes could explain what the telescope has seen.

"We are witnessing a real evolution of the rings with time," Santos-Sanz said. "Of course it is not a certainty, but for me it is the preferred explanation." What's more, this evolution most likely was not just the material from the fading outer ring migrating inward to the inner ring. Measured as equivalent width, the inner ring gained about 10 times more than the outer ring lost.

"We don't know where the extra material is coming from, but there are some hypotheses," Santos-Sanz said.

The leading explanation, Santos-Sanz explains, is a small shepherd satellite sharing the outer ring's orbit. Such an object should explain the rings' stability and their sharp edges and could also shed debris that replenishes C1R. "This satellite has not been detected yet, if it exists," Santos-Sanz said.

A computer model based on JWST data also hints at what the two rings are made of. Santos-Sanz, though, makes it clear that this part of the work is unfinished. "Our feeling after this model is that the inner ring should be composed of bigger particles than the outer ring. The outer ring we think is more dusty," he said. "But this is a work in progress. I can't say with certainty, well, this is dusty, this is not."

The best test, the team argues, would be to catch another Chariklo occultation, this time using visible light, which would separate genuine change from a wavelength effect. "We are searching for new occultations," Santos-Sanz said. Understanding how rings around small bodies evolve over time, he explains, matters, because Chariklo is not the only one to have them.

Rings are now known around another body from the same category as Chariklo, called Chiron, the dwarf planet Haumea, and the trans-Neptunian object Quaoar. Giant-planet rings are already known to shift over months and years; Saturn's D ring has measurably shrunk, and Neptune's Adams arcs rearrange themselves. Now small bodies appear to do it as well.

"I think this work is just a piece of the puzzle," Santos-Sanz said, "but it could be an important clue for broader studies about the rings around minor bodies and around giant planets."

Santos-Sanz's study is published in *Science Advances*: <https://doi.org/10.1126/sciadv.aeh4794>

HoYoverse's Nodusfall might look like Elden Ring, but there's a promising dark fantasy action game here that took me by surprise

Nodusfall, aesthetically at least, is about as far from a typical HoYoverse game as you can get.

Gone are the bright colours, cute creatures, and bountiful anime women. In their place, we get all

Nodusfall, aesthetically at least, is about as far from a typical HoYoverse game as you can get. Gone are the bright colours, cute creatures, and bountiful anime women. In their place, we get all the familiar trappings of dark fantasy: mysterious magic, vicious monsters, and a sense of realism that, honestly, we've all thought it - feels a little bit Elden Ring. But from what I played at Gamescom, Nodusfall has the potential to shake off those FromSoftware comparisons and come into its own.

I'll admit to being a little worried at the beginning of my preview after learning it would consist of two boss battles fought in groups of four. After all, the majority of my co-op experience comes from RuneScape, a 25-year-old MMORPG primarily played with a mouse, and nobody wants to let their team down.

But first came the character selection. There were four options available in my demo: two focused around melee combat, two ranged. Both combat styles offered one character with healing-focused abilities which I immediately discounted - too much responsibility. The archer with a mechanical arm though? Inflicting heavy damage from a distance while taking care of any nasty surprises was definitely something I could do. Decision made, it was time to discover how my chosen role would actually play out in battle.

Nodusfall's combat, it turns out, is easy enough to get to grips with. There's your basic attack, which fills a gauge that eventually allows you to unleash a more powerful attack. Next, a secondary move. For my archer, this was a nifty - and enjoyable - bomb arrow which, once embedded in a foe's flesh, dealt extra when hit. Beyond that, each character has four unique abilities that operate based on cooldowns, some more generous than others.

My archer, for example, had an ability that essentially acted as a dodge - enabling her to jump backwards before firing off a powerful arrow - and another where she unleashed a spirit wolf. Since the wolf only deals damage in close quarters, I'd first have to dash towards a foe before using it, then follow it up with the dodge to regain some distance. All this, I should add, depletes stamina, but the bar is a generous one.

CONTINÚA · HISTORIA 20

And I was thrilled to discover my archer had actual range. I could easily run around the edges of the battlefield, safe in the knowledge my attacks would still land - useful for self-preservation and for helping my fellow teammates out. If a teammate was in need of additional firepower or revival, I could easily weave myself back into the midst of battle. And in this way, it wasn't long before I found myself settling into Nodusfall's surprisingly satisfying fighting rhythm. As for what you'll be fighting, Nodusfall's enemy design draws inspiration from different mythologies around the world. In the demo, for instance, I fought Qiongqi, a creature from Chinese mythology depicted here as a griffin-like beast, and the Maldrake, your more traditional dragon. And HoYoverse has crafted some truly impressive monster encounters that I found myself wanting to stop and properly appreciate - which is pretty hard when the object of your appreciation is also trying to bite your head off.

Each boss battle is structured the way you'd typically expect - multiple stages, each with a new health bar - but, out of the two, the Maldrake was by far my favourite. Since it's a dragon, it attacks by doing the typical dragon things: fire-breathing, jaw-snapping, wing-whacking. Yet, during the fight's opening stage, I noticed something a little bit odd: human-like arms protruding from its chest. The secret behind these arms reveals itself about midway through the battle, when a knight rips itself out of the Maldrake's torso, killing it in the process. Thus the Maldrake fight becomes the Maldrake Knight fight.

Compared to the fairly slow and predictable dragon, the Maldrake Knight is a dangerously fast sword and polearm wielder who you don't want to get cornered by. It can also unleash puddles of black goo, which sap your health if stepped in. All of the strategies I'd been developing for the dragon had to be immediately thrown aside in order to adapt to this very different enemy who just loved tossing people in the air. And I hope HoYoverse can bring the same fun unpredictability to other fights, creating a similar need for experimentation.

Of course, given Nodusfall is a free-to-play title from a studio best known for its gacha games, there are questions to be asked about how this will be monetised. The developer says characters will be unlockable via continuous play rather than the banner system other HoYoverse games like Genshin Impact employ, and so cosmetic monetisation is being considered. Beyond that, however, specifics are limited so we'll have to wait to learn more.

I didn't know what to expect going into Nodusfall's preview, but I had a surprisingly great time. Combat is fast-paced without ever becoming overwhelming, bosses are compelling, and co-op is engaging while remaining approachable. I am, though, curious to learn more about solo play. As to whether Nodusfall can carve out its own niche among the games it's clearly drawing inspiration from, that remains to be seen. From what I've played, though, it's looking promising and I'll be watching its progress during the coming year.

This preview is based on a preview at Gamescom in Cologne, Germany. HoYoverse provided flights and accommodation.

Yes, The FPGB Mini Handheld Is Being Restocked "In 20 Days", But There's A Catch

You've probably seen a new mini FPGA GAME BOY flying around your feeds recently, and that's for good reason: it's a new, pocketable retro handheld that can play your GB/GBC cartridges made by Funny Playing. We were lucky enough to exclusively reveal the device, alongside being one of the first outlets to have a review sample in our hands.

However, communication from FunnyPlaying is limited not only to ourselves but also to the public. They shadowdropped this out of nowhere, with only 20 units being available worldwide at launch. I even warned FunnyPlaying myself that this is abysmal, and when we publish our news post about it, they'll sell out fast, and that they did, in under 10 minutes after we published our post, in fact.

We asked FunnyPlaying why there were only 20 available, when more would be stocked and how many; their response: "Since there are still some issues, we need to make some improvements. Moreover, we are approaching a National Holiday soon, and there are still 30-50 consoles that can only be sold after the holiday". And it matches their added their "wait for 20 days" text they added to their product listing page.

So, the good news is that a restock is not far away, but the catch is that there's a limited amount available, which seems like it's going to be a trend with this device: limited batches, randomly dropped, which isn't helpful to anyone really. What we want is stock in the thousands, with a set pre-order time, so that we can all prepare, but this means it will be nabbed up by those that follow FunnyPlaying and cool retro gaming news outlets closely.

I asked FunnyPlaying if they'll be making new colours in the future too, and even if they'd like to collaborate with us on a Retro Dodo edition in transparent colours, to which they responded: "We will continue to sell it and there is a possibility of upgrading it. Yes, hope we can cooperate. And we will also add new colours based on market feedback", though I doubt a RD edition will ever come to fruition, seeing as their previous marketing efforts are a little on the slow side, but we'll keep pestering.

Our full review will drop next week; I still have some testing to do; it's not perfect. I have noticed my GAME BOY rumble carts don't fit, and the on/off switch can be unreliable, but so far I am having fun with it. Stick around and join our free weekly newsletter to keep updated about this handheld and its stock drops in the future.

What we've been playing - "the rest of the party is, frankly, absolutely feral, so I've been trying to balance that out"

Hello and welcome back to our regular feature where we write a little about the games we've been

Hello and welcome back to our regular feature where we write a little about the games we've been playing. This week it's a Chris Tapsell (that's me!) triple-bill - a triple-Tap? - as the team's been either quite stretched or rightfully enjoying a few days off here and there to catch up from a hectic Gamescom period, leaving me to do a proper bodge job of filling in. Expect the usual mobile game addiction, late review apology, and a rule-bending wildcard (it's not that wild).

Anyway! What have you been playing this week?

Here's another question: do you remember what you were playing last week? You don't have to! The What We've Been Playing archive has you covered.

Pokémon TCG Pocket, iPhone

Let's get the obvious one out of the way first: I play this every day, still. My pack luck has been dreadful with the Team Rocket set - duplicates of shinies I have no interest in (Seaking, anyone?) but still missing genuinely useful cards from the main set such as Team Rocket's Raticate ex. Nightmare. Anyway, I've loved the Rocket set itself - it's offered a rare bit of playfulness, and the artworks have been wonderful on the cards, even if the meta's a little stale.

Star Wars: Zero Company, PC

Yes I know I said the review would be ready soon, and I promise it is actually going to be ready very soon, but: it is not ready right now. I'm still thoroughly enjoying it but finding it slow going, and amid other games that have had deadlines come and go - see: ol' Wolverine - it's had to temporarily go on the back burner. Shout out to the Anakin level though. And hopefully slightly more sophisticated thoughts than this from me are coming actually soon.

Dungeons & Dragons, tabletop

I'm a bit of a newcomer to D&D proper, having dabbled very briefly forever ago but never got going with a regular group. I'm now very much in one, and it's a treat - although progress through the actual "main quest" of our "campaign" is remarkably slow (I gather that's kind of standard).

CONTINÚA · HISTORIA 22

My character is a Loxodon - think a Kajiit but an elephant-person instead of cat-person - with a background as a kind of wandering cleric. The rest of the party is, frankly, absolutely feral, and so I've been trying to balance that out with a character who wishes to be a bit more of a pacifist. There's also a deeply suspicious Tiefling warlock on our crew, who I've been tasked with keeping an eye on by the DM. It's made me into a kind of cross: part weary Gandalf trying to wrangle stray Hobbits, part chin-stroking Brother William of Baskerville. Most of the time it's a case of my friends trying to hit things they shouldn't, and me subsequently putting them to sleep until they calm down. (And that's very fun).

Moonlighter 2: The Endless Vault, Xbox Series X

Bonus freelancer pick here (or ominous freelance hijacking, if you're feeling naughty). The first Moonlighter game - the one where you sell dusty relics in a shop, then moonlight as a sword-swinging dungeon explorer in search of even more sellable relics - never quite grabbed me as much as I thought it should. This new sequel? I've already sunk way too much time into the moreish roguelike since its early access exit.

The difference here, I think, is that there's always a meaningful new upgrade or shiny weapon or potion enhancement or shop decoration or blobby wobbly pet to save money for. And each one of them can quite drastically change how you approach your next progen run or shift on the shop floor. It's a really satisfying ride to get stuck on, and the much improved monster bashing doesn't hurt.

Dead Space Gets Reimagined As A Nokia 3310 Game In This Retro

Dead Space is a creepy game. It's a fine example of the survival-horror genre, and it would have been so much cooler than having Snake or Q*bert on the 3310 when I was younger. Ok, the game wasn't around at the same time that I was making Nintendo ringtones by inputting numbers in the tone maker or writing 'hey u' by typing '4433999 88'. And if you're too young to understand what that is, then go ask your parents how they used to text.

Dead Space as a Nokia 3310 game isn't something that I had on my Friday bingo card, but here it is. The game has been out for a little while now and was made for the Nokia 3310 Jam, but now has an updated version that's playable. I love the tagline that Davide Puato has put on the list - 'Experience the classic action survival horror through a tiny, mono-audio, 2-colour screen'. I mean, that would be enough to put some people off, but not this nostalgia seeker. And it's got nothing to do with the fact that its 95% less scary either... honestly.

The game has been made to run on Windows, which is fine, as I don't reckon that many people will still have a 3310 lying around in the age of smartphones and social media (although I for one would love to be off grid with a 3310 again!). Players can walk using the arrow keys, interact with 'Up', and aim with Z. Shooting and stomping happen by pressing X, and you can heal or use stasis by pressing C.

I've played this game a lot in the past, and seeing it on such a small screen as a side-scroller is so weird. It's still got the DNA of Deep Space, though, and it's another reason why I love the demak community so much. I love the ingenuity and imagination involved with taking such a beloved game and devolving it for a phone that came out years before. Plus, there's no AI allowed in game jam competitions either, which suits me down to the ground!

How Arcades Shaped Modern Online Gaming

by Old School Gamer | Sep 18, 2026 | Gaming

Many of today's most dedicated gamers got their start in arcades. The late 70s and early 80s filled big rooms with giant cabinets that challenged players with tough games that, at times, bordered on unfair. The currency of the era was quarters: each coin marked one life, and each retry meant one less quarter in your pocket. The only way to get good was to sink countless coins into your favorite game. However, once you got those skills sharpened, you could dominate Pac-Man or Space Invaders with just one coin.

As gaming moved from physical machines to home consoles, gaming became less saving quarters and more about variety. The new free-to-play titles looked back to their arcade predecessors for inspiration. It's still a game about winning player loyalty, except it's less about physical quarters and more about virtual ones.

The Shift to Virtual Currency Loops

Back in the day, the goal of every game was to catch as many quarters as possible. For retro arcade games, that was the easiest way to make up for their costs. However, advances in online technology have flipped the script on its head. Nowadays, you can get free coins in Fortunes Ultimate Slots or claim free characters in gacha games. Instead of sinking quarters, you're getting free virtual coins instead. They come in the form of welcome bonuses or login streak rewards, whatever it takes to keep you coming back.

This approach bridges the gap between how old-school arcades used to do things and modern digital gaming economies. Both offer free tokens and other goodies to win you over. However, while arcades could only do this occasionally, online games can afford to be much more generous. The idea of giving away the entire game for free would have sounded wild in the arcade era, but that's the power of microtransactions at play.

Dominating arcade games with just a couple of quarters was a flex in itself, but it also presented an opportunity to leave your mark on the leaderboards. Old games were all about racking up points, allowing you to flaunt the fact you're the best even when you aren't around to show your skills in person. This created the sort of local arcade legends and stories about that one crazy good player whose initials were at the top of every cabinet leaderboard.

CONTINÚA · HISTORIA 24

That competitive spirit has persisted in many online games. Some make it the cornerstone of the experience, where players constantly face off against each other to get a better rank. Others provide standard gameplay and instead give you a score based on the number of moves or how long it took you to beat a level. The options are limitless, but the fundamental motivation to compete and be the best stays the same.

The global nature of online gaming has also allowed the best players to fully dedicate themselves to the craft and become professional gamers. Whereas arcade legends practiced to save coins and flaunt their status, this new generation of players can make a living from sharpening their skills.

The Spirit of the Arcade Lives On

While the format has changed, the basic layout set by arcades still shapes modern gaming. High scores may give way to ranks and large cabinets may get replaced by phone screens, but the desire to overcome challenges and be the best lives on. Classic arcade games are also available on mobile , so you can enjoy your old favorites at any time. You don't even have to raid your swear jar for quarters!
